QUESTION 1

Which statement is true about how the BPEL Process Manager works?

- A. If the transaction property for a synchronous BPEL process is set to requiresNew transaction, a new transaction is created for the execution and the existing transaction (if there is one) is suspended.
- B. If the transaction property for an asynchronous BPEL process is set to required, the BPEL process joins a caller's transaction (if there is no one) or creates a new transaction (if there is no transaction)
- C. If the delivery policy for a synchronous BPEL process is set to sync, the instance-initiating message is not temporarily saved in the delivery layer.
- D. If the delivery policy for a synchronous BPEL process is set to async.persist, messages to the system are saved in the delivery store before being picked up by the service engine.

Correct Answer: A

With `bpel.config.transaction` Set to `requiresNew` a new transaction is always created and an existing transaction (if there is one) is suspended.

QUESTION 2

In a BPEL model, what is quickest way to implement a capability to skip rule execution if particular condition holds?

- A. Model a switch activity to conditionally execute the business rule component.
- B. Use a skip condition on the business rule component.
- C. Include an XPath expression in an annotation on the business rule component.
- D. Use a correlation set on the business rule component.

Correct Answer: C

QUESTION 3

Which two statements are true about messages that are marked "Exhausted" on the Recovery tab of the BPEL service engine in Enterprise Manager Fusion Middleware Control?

- A. They are messages that have exceeded the maximum number of auto recovery attempt.
- B. They can be marked again For auto recovery by using the "Reset" feature in the recovery console.
- C. Rejected messages are directly marked as "Exhausted."
- D. The "Refresh Alarm table" option can be used to resubmit Exhausted messages.
- E. Exhausted messages for Mediator components can be manually recovered from the same location in Fusion Middleware Control.

Correct Answer: AE

* Go to BPEL Recovery Console Access the Recovery page of the BPEL process service engine to perform message recovery. You can also access the Recovery page later by selecting Service Engines > BPEL from the SOA Infrastructure menu and clicking the Recovery tab in the resulting page.

QUESTION 4

Which capability or benefit is not applicable to Oracle Service Bus?

- A. Service mediation
- B. Service abstraction
- C. Translation and transformation
- D. Service creation
- E. Stateful processing

Correct Answer: E

Service Bus only can do stateless processing, and one of the most important benefits of Service Bus is the service abstraction

QUESTION 5

You are implementing SOA asset lifecycle management in your organization. In the service definition phase, architects and business analysts identify requirements. What should you do with the requirements so they can be tracked through the lifecycle?

- A. Document them in BPEL models.
- B. Add them to the Enterprise Repository.
- C. Add them to the Service Registry.
- D. Use harvesting tools to produce web service implementations.
- E. Produce value chain and strategy map documentation.

Correct Answer: B

Note:

The Oracle Enterprise Repository provides the following value to customers:

*

Visibility into all SOA assets and their relationships

Automatically collects and populates the Oracle Enterprise Repository and o Registry with existing services and other assets through introspection and synchronization with developer tools.

Provides a flexible and extensible model for categorizing SOA assets.

o

Provides visibility of assets that currently exist, are planned, or are in o development to reduce duplication of effort.

Automatically discovers, maps, and manages new dependencies to o support impact analysis.

*

End-to-end governance throughout the lifecycle

Automates repeatable processes for registration and lifecycle management o through out-of-the-box workflows based on best practices. Provides visibility into policies throughout the lifecycle to promote trust in o

service quality, performance, and security.

Communicates architectural standards and tracks architectural o compliance.

*

Analytics

Tracks and reports on reuse throughout the entire service lifecycle, o including development reuse, run time service reuse statistics and data on consumption and compliance through scorecards.

Collects and communicates vital information on service performance, o quality, and compliance with corporate standards.

Supports critical decisions with feedback on SOA compliance, o performance, and ROI.
