---

### QUESTION 2

You are loading a file into a database but the file name is unknown at design time and will have to be passed dynamically to a Package at run time; how do you achieve this?

- A. Create a variable, use it in Topology at the File dataserver-level, and add it to a package as a Declare Variable step
- B. Create a variable, use it in Topology at the File dataserver-level, and add it to a package as a Set Variable step
- C. Create a variable, use it as the Resource Name of the File datastore, and add it to a package as a Declare Variable step
- D. Create a variable, use it as the Resource Name of the File datastore, and add it to a package as a Set Variable step

Correct Answer: C

---

### QUESTION 3

In ODI, is it possible to reverse a COBOL flat file using a Copybook definition?

- A. Yes, only using the file driver
- B. Yes, using the file and complex file drivers
- C. Yes, but only if the source file is an EBCDIC file.
- D. No, you need to manually add the columns definition in all the cases.

Correct Answer: A

---

#### QUESTION 4

To load a specific table using ODI, do you need to draw directly in the flow all details about how the different servers involved are connected?

- A. Yes, and also specify with variables the passwords for connecting to the data contained in the servers.
- B. No, the code will be black box-generated directly by ODI.
- C. No, ODI automatically designs the flow and how servers are connected.
- D. In the ODI interface palette, choose the more convenient graphic objects to link the involved servers.

Correct Answer: C

---

#### QUESTION 5

Prior to executing an interface or mapping in ODI, do you have to deploy the generated code manually in a source or target server?

- A. Yes, you have to copy all the procedures generated into the development, test, and production servers.
- B. No, ODI prepares a package for the development environment.
- C. Yes, you have to compile the generated code and then double-check if the code prepared for the development server is the same as the code for the production server.
- D. No, ODI Agent coordinates the execution of the commands prepared for the job, and executes them on the correct server.

Correct Answer: D
