QUESTION 1

What happens if you execute these SQL statements?

```
SQL> show con_name
```

CON_NAME

CDB\$ROOT

```
SQL> create user 1_freed identified by y container=current;
```

A. A common user is created in the root container.

B. A local user is created in the root container.

C. A local user is created in all the PDBs.

D. The second SQL statement fails because a local user cannot be created in the root container.

Correct Answer: B

QUESTION 2

A standby database is in mounted state and you are required to perform a failover to the physical standby. Which solution is best suited for this scenario?

A. ALTER DATABASE RECOVER MANAGED STANDBY DATABASE statement with the FINISH keyword

B. ALTER DATABASE PREPARE TO SWITCHOVER and ALTER DATABASE COMMIT TO SWITCHOVER statements

C. ALTER DATABASE RECOVER TO STANDBY DATABASE statement with the FINISH keyword

D. D) ALTER DATABASE PREPARE SWITCHOVER and ALTER DATABASE COMMIT TO SWITCHOVER Statements

Correct Answer: A

QUESTION 3

Which two statements represent where Oracle Net must reside?

A. Only on the client for traditional client/server applications

B. Only on the database server for web-based applications

C. On both the web server and database server for web-based applications

D. On both the client and database server for traditional client/server applications.

Correct Answer: BD

QUESTION 4

Your database is open and the listener is running. The DBA stops the listener by using the command:

LSNRCTL> STOP

What happens to the sessions that are currently connected to the database instance?

- A. They can perform only queries.
- B. They are not affected and continue to function normally.
- C. They are terminated and the active transactions are rolled back.
- D. They are not allowed to perform any operations till the listener is started.

Correct Answer: D

Note: Oracle Net Listener is a separate process that runs on the database server. It receives incoming client connection requests and manages the traffic of these requests to the database server.

QUESTION 5

Which two statements about switchover and failover are true?

- A. A snapshot standby can be the target of a switchover or fast-start failover operation.
- B. Neither a switchover nor a failover is possible to a far sync instance.
- C. For fast-start failover, you must preselect the target standby database that will be used.
- D. You can activate a standby database to test whether it is being updated correctly.

Correct Answer: BC
