QUESTION 1

Which two item descriptors are subtypes of a media item?

A. Media-external

B. Media-internal

C. Media-internal-text

D. Media-image

Correct Answer: AC

The media item includes a property named type that is used to specify the media sub-type of the item.

The standard catalog includes three sub-types:

media-external: This item type references a piece of content that is stored outside the database. The content can be either be either a binary file or a text file.

media-internal-binary: This item type can be used to store binary objects (such as images) in the catalog database.

media-internal-text: This item type can be used to store text files (such as JSPs) in the catalog database.

QUESTION 2

How does the ATG\\'s pipeline manager identify the next element in the pipeline to be executed within a chain?

A. using data in the Profile Marker

B. through the Pipeline registry XML data

C. using data in the Order marker

D. via the transition tag in Pipeline Definition Files

E. by using the component configuration of the pipeline manager component

Correct Answer: E

The Pipeline Manager is a system that executes a series of processors, which are linked in processor chains. A processor is a component that executes a piece of functionality and returns a status code. The status code determines which processor in the chain to execute next. The Pipeline Manager enables you to dynamically add and remove processors and chains of processors.

QUESTION 3

How do you define ID as a composite key in the item descriptor of a table?

A.
