QUESTION 1

Which XML file(s) are loaded by the component/atg/commerce/catalog/ProductCatalog?

- A. /atg/commerce/catalog/custom/customCatalog.xml only
- B. /atg/commerce/catalog/custom/customCatalog.xml, /atg/commerce/pricing/pricingModels.xml
- C. /atg/commerce/catalog/custom/customCatalog.xml, /atg/commerce/pricelists.xml
- D. All XMLs that are listed in the XML list of the product catalog component

Correct Answer: D

ATG Consumer Commerce comes with an XML definition file that contains the information for the standard product catalog. A reference to this XML file is found in the /atg/commerce/catalog/ProductCatalog component. The location of this XML file is /atg/commerce/catalog/productCatalog.xml.

Note: ATG Commerce stores its product catalog data in a SQL database and accesses that data via the SQL Repository Adapter. In order for the SQL Repository Adapter to be able to access your product catalog information, all of the information regarding the definition of your item types must be defined in an XML repository template definition file.

QUESTION 2

Consider the following code snippet:

To get an output of "Joe Bruin", which two methods should the droplet use in the code?

- A. getLocalParameter("first") and getLocalParamter("last")
- B. getParameter("first") and getLocalParameter("last")
- C. getLocalParameter("first") and getParameter("last")
- D. getPageParameter("first") and getParameter("last")

Correct Answer: D

first is a page parameter. We use getPageParameter to access it. last is a bean parameter. We use getParameter to access it.

Note: dsp:param

Identifies a servlet bean input parameter; or defines a page parameter.

attributes

name (servlet bean)

Identifies an input parameter that is defined for the current servlet bean. For information on input parameters for specific servlet beans, see Appendix B, ATG Servlet Beans.

name (page parameter)

Defines a page parameter that is accessible to the current JSP and embedded child pages.

QUESTION 3

Which three options are BASE form handlers that provide a clean mechanism to implement a custom form handler?

- A. EmptyFormHandler
- B. GenericFormHandler
- C. CartCheckoutFormHandler
- D. ProfileFormHandler
- E. TransactionaFormHandler

Correct Answer: ABE

Subclassing ATG Form Handlers

Oracle ATG Web Commerce form handler classes all implement the interface `atg.droplet.DropletFormHandler`. Three form handler base classes implement this interface:

*

`atg.droplet.EmptyFormHandler`

*

`atg.droplet.GenericFormHandler`

*

`atg.droplet.TransactionaFormHandler`

You can create a form handler by extending one of these classes or any of their subclasses. er:

QUESTION 4

Which two item descriptors are subtypes of a media item?

- A. Media-external
- B. Media-internal
- C. Media-internal-text

D. Media-image

Correct Answer: AC

The media item includes a property named type that is used to specify the media sub-type of the item.

The standard catalog includes three sub-types:

media-external: This item type references a piece of content that is stored outside the database. The content can be either be either a binary file or a text file.

media-internal-binary: This item type can be used to store binary objects (such as images) in the catalog database.

media-internal-text: This item type can be used to store text files (such as JSPs) in the catalog database.

QUESTION 5

Which is a valid list of component scopes?

- A. Singleton, Session, Request
- B. Global, Session, Request, Dynamic
- C. Singleton, Prototype, Request, and Session
- D. Global, Session, Request, and Window
- E. Singleton, Global, Session, Request

Correct Answer: D

An application component can be set to one of the following scopes:

*

Global: Component is shared among all users.

*

Session: Separate instances of the component are provided to each user.

*

Request: Separate instances of the component are provided to each active request.

Note: ATG support Window scope which allows you to associate specific component instances with a specific browser window. Such components need to live longer than a request and also need to be different for every browser window associated with the user's session.
