QUESTION 1

Which three methods are defined by the ItemPricingCalculator interface?

- A. getPrice
- B. priceEachItem
- C. priceItem
- D. priceOrder
- E. priceSku
- F. priceItems

Correct Answer: BCF

ItemPricingCalculator Interface

atg.commerce.pricing.ItemPricingCalculator modifies the price of a CommerceItem.

A calculator's priceItem, priceEachItem, or priceItems method is invoked by the corresponding method of the same name on the pricing engine. The calculator's priceItem method modifies the input priceObjects according to the current pricing context. The specific way in which the calculator modifies an item price varies according to individual implementations.

QUESTION 2

Which XML file(s) are loaded by the component/atg/commerce/catalog/ProductCatalog?

- A. /atg/commerce/catalog/custom/customCatalog.xml only
- B. /atg/commerce/catalog/custom/customCatalog.xml, /atg/commerce/pricing/pricingModels.xml
- C. /atg/commerce/catalog/custom/customCatalog.xml, /atg/commerce/pricelists.xml
- D. All XMLs that are listed in the XML list of the product catalog component

Correct Answer: D

ATG Consumer Commerce comes with an XML definition file that contains the information for the standard product catalog. A reference to this XML file is found in the /atg/commerce/catalog/ProductCatalog component. The location of this XML file is /atg/commerce/catalog/productCatalog.xml.

Note: ATG Commerce stores its product catalog data in a SQL database and accesses that data via the SQL Repository Adapter. In order for the SQL Repository Adapter to be able to access your product catalog information, all of the information regarding the definition of your item types must be defined in an XML repository template definition file.

QUESTION 3

What is the best way to display the contents of an open parameter in a Custom Droplet?

- A. Use the `getParameter` to get the open parameter and print it out in the droplet.
- B. Use the `request.render` method to render the open parameter.
- C. Use the `response.redirect` method to redirect to the JSP fragment in the open parameter
- D. Use the `request.serviceParameter` method to render the open parameter.

Correct Answer: D

Although it is possible to pass open parameters to ATG servlet beans, those parameters should not be read with the standard `getParameter()` method. In fact, it is unlikely that your ATG servlet bean wants to see the actual value of an open parameter. In most situations, an ATG servlet bean wants to output the value of an open parameter. To do this, use the `serviceParameter` method of the request.

Example: `request.serviceParameter ("storename", request, response);`

QUESTION 4

The default Task for a merchandiser in ATG workflow after production deployment is complete is_____.

- A. Verify Production Deployment
- B. Approve Production Deployment
- C. Close Project
- D. Revert Deployment
- E. Commit updates

Correct Answer: A

The default Manage Commerce Assets workflow includes the following tasks:

Author Content Review Approve for Production Deployment Wait for Production Deployment Completion Verify Production Deployment

QUESTION 5

To encrypt userID cookie, what must you do?

- A. Edit property `cookieHashKey` of `/atg/userprofiling/CookieManager`.
- B. Add `encryptionKey` on `/atg/userprofiling/ProfileTools`.
- C. Ensure property `securityStatus` of user is `SECURE-SIGNIn`.
- D. Set property `secured = true` of component `CookiePipelineServlet`.

Correct Answer: A

To change the secret key that the Personalization module uses to hash the user ID cookie, edit the following property of/atg/userprofiling/CookieManager:

Note: cookieHashKeySets the hash key to use for hashing user ID cookies. If this property is set, its value is used for the hash key rather than a value generated by the HashInitializer component. Sets a secret key that the Personalization module uses to hash the user ID cookie. This behavior makes user cookies more secure and prevents users from using another user's profile by changing their cookie. Invalid profile cookies are ignored. You may want to change this from the

default value, so that your site's cookies will be hashed with a different key from that used by other sites that run ATG products.
