QUESTION 1

Which files will get restructured in a full BSO restructure?

- A. Data file only
- B. Index file only
- C. Data and index file
- D. No file

Correct Answer: C

There are two types of restructures of Essbase BSO databases.

Full/dense restructure recreates the index file (Ess*.IND) and the data file (Ess*.PAG).

A sparse restructure recreates the index file (Ess*.IND) only.

QUESTION 2

Which setting will give information about when a data block is calculated?

- A. SET MSG INFO;
- B. SET MSG SUMMARY;
- C. SET MSG DETAIL;
- D. SET MSG WARNING;

Correct Answer: C

The command SET MSG sets the level of messaging you want returned about calculations, and enables simulated calculations.

Syntax

SET MSG SUMMARY | DETAIL | ERROR | WARNS | INFO | NONE | ONLY;

SET MSG DETAIL provides the same information as SUMMARY. In addition, it displays a detailed information message every time Analytic Services calculates a data block.

QUESTION 3

Which statement related to Essbase design is true?

- A. Calc scripts are more efficient at performing calculations vs. member unary operators and member formulas
- B. One big application is better than three smaller focused applications.

- C. Attribute dimensions require less performance consideration in ASO databases because they are treated as alternate rollups
- D. Attribute dimensions require less performance consideration in BSO databases because they are dynamically calculated
- E. Bigger block sizes are better than smaller block sizes

Correct Answer: D

QUESTION 4

The following objects are considered metadata in Essbase studio except for which two?

- A. Dimensional element
- B. Hierarchy
- C. Cube Schema
- D. Metaoutline
- E. Essbase Model
- F. Metamodel

Correct Answer: EF

Metadata is defined as data about data. Metadata is a record of all information of database.

QUESTION 5

Which two statements are true (assuming data is loaded to a BSO database and to the members noted below)?

- A. If you delete a sparse shared member, the outline file shrinks.
- B. If you delete a sparse shared member, the page file shrinks.
- C. If you delete a sparse stored member, the index file shrinks.
- D. If you delete a sparse stored member, the block density shrinks.
- E. If you delete a dense shared member, the block size shrinks.
- F. If you delete a dense stored member, the number of blocks shrinks

Correct Answer: AC

C: If a member of a sparse dimension is moved, deleted, or added, Essbase restructures the index and creates new index files. Restructuring the index is relatively fast; the time required depends on the index size.

Sparse restructures are typically fast, but depend on the size of the index file(s). Sparse restructures are faster than dense restructures.
