QUESTION 1

What value uniquely identifies an instance in a RAC database?

A. Location name

B. Node hostname

C. Listener and port

D. SID

E. VIP

Correct Answer: D

The Oracle SID uniquely identifies the Oracle RAC database instance on the node where the instance is running.

QUESTION 2

Why do you need SSH to install Oracle Database with the RAC option on Linux?

A. To authenticate the installation user

B. To copy software to other nodes in the cluster

C. Oracle Clusterware processes require SSH for post-install authentication across nodes

D. To authenticate the listener process for inter-node communication

Correct Answer: B

During the installation of Oracle RAC, OUI needs to copy files to and execute programs on the other nodes in the cluster. In order to allow OUI to do that, you must configure SSH to allow user equivalence. Establishing user equivalence with SSH provides a secure means of copying files and executing programs on other nodes in the cluster without requiring password prompts.

QUESTION 3

List the syntax supported by the Cluster Verification Utility (CVU). (select all that apply)

A. comp - To show valid components with description

B. stage - To list pre and post checks of stages

C. asm - To list valid disks available

D. dbstat - To list number of instances available online

Correct Answer: AB

A: To verify the minimal system requirements on the nodes prior to installing Oracle Clusterware or Oracle RAC, use the sys component verification command as follows:

cluvfy comp sys [-n node_list] -p { crs | database } } [-r { 10gR1 | 10gR2 | 11gR1}] [-osdba osdba_group] [-orainv orainventory_group] [-verbose]

B: To verify whether your system meets all of the criteria for an Oracle Clusterware installation, use the - pre crsinst command for the Oracle Clusterware installation stage as follows:

cluvfy stage -pre crsinst -n node_list

[-c ocr_location] [-r { 10gR1 | 10gR2 | 11gR1}][-q voting_disk] [-osdba osdba_group] [-orainv orainventory_group] [-verbose]

QUESTION 4

You are creating a RAC database with DBCA. Which of these is NOT a main area of initialization parameters you can configure as part of the process?

A. Memory

B. page size

C. Character set

D. Connection mode

Correct Answer: B

The Initialization Parameters page appears. By default, the Initialization Parameters page shows only the basic parameters, and only enables you to change the parameter file definition if you are using raw storage. Each tab on the Initialization Parameters page provides different sets of information that you can add or modify as follows:

a.

 Memory Tab.

b.

 Sizing Tab: Use this page to select the database standard block size and process count.

c.

 Character Sets Tab: Use this page to set the database character set value.

d.

 Connection Mode Tab: You can use this tab to select either dedicated or shared database connections to your database.

e.

 Parameter File Tab: This tab will only appear if you are using raw storage. Use this tab to enter a raw device name for the location of the server parameter file.

QUESTION 5

You want to install Grid Infrastructure for a cluster and the Oracle Database software (with the RAC option). Do you need SSH user equivalency?

A. Yes, to ensure security during the installation.

B. Yes, to set up administrative privileges for the DBA.

C. Yes, to allow the use of SSH and SCP without being prompted for a pass phrase.

D. No, you don\\'t need SSH user equivalency.

Correct Answer: C

During the installation of Oracle RAC, OUI needs to copy files to and execute programs on the other nodes in the cluster. In order to allow OUI to do that, you must configure SSH to allow user equivalence. Establishing user equivalence with SSH provides a secure means of copying files and executing programs on other nodes in the cluster without requiring password prompts.
