QUESTION 1

Which two actions can be used in registering a JDBC 3.0 driver?

- A. Add the driver class to the META-INF/services folder of the JAR file.
- B. Set the driver class name by using the jdbc.drivers system property.
- C. Include the JDBC driver class in a jdbcproperties file.
- D. Use the `java.lang.Class.forName` method to load the driver class.
- E. Use the `DriverManager.getDriver` method to load the driver class.

Correct Answer: AD

A: If your JDBC Driver is NOT JDBC 4-compliant then we can update the driver using "jar" utility by adding the "META-INF/services/java.sql.Driver" inside it. as following:

D: Dynamic loading of Java classes at runtime provides tremendous flexibility in the development of enterprise systems. It provides for the basis of "application servers", and allows even simpler, lighter-weight systems to accomplish some of the same ends. Within Java, dynamic-loading is typically achieved by calling the `forName` method on the class `java.lang.Class`

QUESTION 2

A valid reason to declare a class as abstract is to:

- A. define methods within a parent class, which may not be overridden in a child class
- B. define common method signatures in a class, while forcing child classes to contain unique method implementations
- C. prevent instance variables from being accessed
- D. prevent a class from being extended
- E. define a class that prevents variable state from being stored when object instances are serialized
- F. define a class with methods that cannot be concurrently called by multiple threads

Correct Answer: B

Note: An abstract method in Java is something like a pure virtual function in C++ (i.e., a virtual function that is declared = 0). In C++, a class that contains a pure virtual function is called an abstract class and cannot be instantiated. The same

is true of Java classes that contain abstract methods.

Any class with an abstract method is automatically abstract itself and must be declared as such.

An abstract class cannot be instantiated.

A subclass of an abstract class can be instantiated only if it overrides each of the abstract methods of its superclass and

provides an implementation (i.e., a method body) for all of them. Such a class is often called a concrete subclass, to emphasize the fact that it is not abstract.

If a subclass of an abstract class does not implement all the abstract methods it inherits, that subclass is itself abstract.

static, private, and final methods cannot be abstract, since these types of methods cannot be overridden by a subclass. Similarly, a final class cannot contain any abstract methods.

A class can be declared abstract even if it does not actually have any abstract methods.

Declaring such a class abstract indicates that the implementation is somehow incomplete and is meant to serve as a superclass for one or more subclasses that will complete the implementation. Such a class cannot be instantiated.

QUESTION 3

Given:

```
import java.util.Scanner;

public class Painting {

public static void main(String[] args) {

String input = "Pastel, *Enamel, Fresco, *Gouache";

Scanner s = new Scanner(input);
```

- A. useDelimiter(",\\s*"); while (s.hasNext()) { System.out.println(s.next()); } } } What is the result?
- B. Paste1 Ename1 Fresco Gouache
- C. Paste1 *Ename1 Fresco *Gouache
- D. Pastel Ename1 Fresco Gouache
- E. Pastel Ename1, Fresco Gouache

Correct Answer: B

QUESTION 4

Give:

```
public class Test {

public static void main(String[] args) {

String svar= "sports cars";

svar.replace(svar,"convertibles");
```

```
System.out.printf("There are %3$s %2$s and %d trucks.",5,svar,2+7);  
  
}  
  
}
```

What is the result?

- A. There are 27 sports cars and 5 trucks
- B. There are 27 convertibles and 5 trucks
- C. There are 9 sports cars and 5 trucks
- D. There are 9 convertibles and 5 trucks
- E. `IllegalFormatConversionException` is thrown at runtime

Correct Answer: C

QUESTION 5

Which code fragment correctly appends "Java 7" to the end of the file `/tmp/msg.txt`?

- A. `Filewriter w = new FileWriter("/tmp/msg.txt");`
- B. `append("Java 7");`
- C. `close();`
- D. `Filewriter w = new FileWriter("/tmp/msg.txt", true);`
- E. `append("Java 7");`
- F. `close();`
- G. `Filewriter w = new FileWriter("/tmp/msg.txt", FileWriter.MODE_APPEND);`
- H. `append("Java 7");`
- I. `close();`
- J. `Filewriter w = new FileWriter("/tmp/msg.txt", Writer.MODE_APPEND);`
- K. `append("Java 7");`
- L. `close();`

Correct Answer: B

`FileWriter(File file, boolean append)`

Constructs a `FileWriter` object given a `File` object.

If the second argument is true, then bytes will be written to the end of the file rather than the beginning.

Parameters:

file - a File object to write to append - if true, then bytes will be written to the end of the file rather than the beginning
