### QUESTION 1

Given three resources bundles with these values set for menu1: (the default resource bundle in US English.)

English US Resource Bundle

Menu1 = small

French Resource Bundle

Menu1 = petit

Chinese Resource Bundle

Menu1 =

And given the code fragment:

```
Locale.setDefault(new Locale("es", "ES")); // Set default to Spanish and Spain
```

```
Locale loc1 = Locale.getDefault();
```

```
ResourceBundle message = ResourceBundle.getBundle("MessageBundle", loc1);
```

```
System.out.println(message.getString("menu1"));
```

What is the result?

- A. No message is printed
- B. Petit C.
- D. A runtime error is produced

Correct Answer: D

There is no Spanish resource bundle. The following runtime error will occur:

```
Exception in thread "main" java.util.MissingResourceException: Can't find bundle for base name MessageBundle, locale es_ES
```

---

### QUESTION 2

Given the following code fragment:

10.

```
p1 = paths.get("report.txt");
```

11.

```
p2 = paths.get("company");
```

12.

// insert code here

Which code fragment, when inserted independently at line 12, move the report.txt file to the company directory, at the same level, replacing the file if it already exists?

- A. `Files.move(p1, p2, StandardCopyOption.REPLACE_EXISTING, StandardCopyOption.ATOMIC_MOVE);`
- B. `Files.move(p1, p2, StandardCopyOption.REPLACE_Existing, LinkOption.NOFOLLOW_LINKS);`
- C. `Files.move (p1, p2, StandardCopyOption.REPLACE_EXISTING, LinkOption.NOFOLLOW_LINKS);`
- D. `Files.move(p1, p2, StandardCopyOption.REPLACE_EXISTING, StandardCopyOption.copy_ATTRIBUTES, StandrardCopyOp)`
- E. `Files.move (p1, p2 StandardCopyOption.REPLACE_EXISTING, StandardCopyOption.copy_ATTRIBUTES, LinkOption.NO)`

Correct Answer: A

Moving a file is equally as straight forward ?`move(Path source, Path target, CopyOption... options);`

The available `StandardCopyOptions` enums available are:

`StandardCopyOption.REPLACE_EXISTING`

`StandardCopyOption.ATOMIC_MOVE`

If `Files.move` is called with `StandardCopyOption.COPY_ATTRIBUTES` an `UnsupportedOperationException` is thrown.

---

### QUESTION 3

Given the fragment:

```
class MyClass extends Thread {
    public OtherThread ot;
    MyClass(String title) {
        super(title);
    }
    public static void main(String[] args) {
        MyClass a = new MyClass("Thread A");
        MyClass b = new MyClass("Thread B");
        a.setThread(b);
        b.setThread(a);
        a.start();
        b.start();
    }
    public void run() {
        // use variable "ot" to do time-consuming stuff
    }
    public void setThread(Thread x) {
        ot = (OtherThread)x;
    }
}
```

If thread a and thread b are running, but not completing, which two could be occurring?

- A. livelock
- B. deadlock
- C. starvation
- D. loose coupling
- E. cohesion

Correct Answer: AB

A: A thread often acts in response to the action of another thread. If the other thread's action is also a response to the action of another thread, then livelock may result. A thread often acts in response to the action of another thread. If the other thread's action is also a response to the action of another thread, then livelock may result.

B: Deadlock describes a situation where two or more threads are blocked forever, waiting for each other.

#### QUESTION 4

You have been asked to create a ResourceBundle file to localize an application.

Which code example specifies valid keys menu1 and menu2 with values of File Menu and View Menu?

- A. File Menu View Menu
- B. menu1File Menu menu1View Menu
- C. menu1m File menu, menu2, view menu
- D. menu1 = File Menu menu2 = View Menu

Correct Answer: D

A properties file is a simple text file. You can create and maintain a properties file with just about any text editor.

You should always create a default properties file. The name of this file begins with the base name of your ResourceBundle and ends with the .properties suffix. In the PropertiesDemo program the base name is LabelsBundle. Therefore the default properties file is called LabelsBundle.properties. The following example file contains the following lines:

```
# This is the default LabelsBundle.properties file s1 = computer s2 = disk s3 = monitor s4 = keyboard
```

Note that in the preceding file the comment lines begin with a pound sign (#). The other lines contain key-value pairs. The key is on the left side of the equal sign and the value is on the right. For instance, s2 is the key that corresponds to the value disk. The key is arbitrary. We could have called s2 something else, like msg5 or diskID. Once defined, however, the key should not change because it is referenced in the source code. The values may be changed. In fact, when your localizers create new properties files to accommodate additional languages, they will translate the values into various languages.

---

## QUESTION 5

Given:

```
public class Counter {  
  
    public static int getCount(String[] arr) {  
  
        int count =0 ;  
  
        for(String var:arr) {  
  
            if(var!=null) count++;  
  
        }  
  
        return count;  
  
    }  
  
    public static void main(String[] args) {  
  
        String[] arr =new String[4];  
  
        arr[1] = "C";  
  
        arr[2] = "";  
  
        arr[3] = "Java";  
  
        assert (getCount(arr)  
  
        System.out.print(getCount(arr));  
  
    }  
  
}
```

And the commands:

```
javac Counter.java
```

```
java -ea Counter
```

What is the result?

- A. 2
- B. 3
- C. NullPointerException is thrown at runtime
- D. AssertionError is thrown at runtime
- E. Compilation fails

Correct Answer: D

The command line `javac Counter.java` will compile the code.

The command line `java -ea Counter` will run the code with assertions enabled.

The following line:

```
assert (getCount(arr))
```

where the Boolean expression `getCount(arr)`

Note: The `javac` command compiles Java source code into Java bytecodes. You then use the Java interpreter - the `java` command - to interpret the Java bytecodes.

Note 2: The `java` tool launches a Java application. It does this by starting a Java runtime environment, loading a specified class, and invoking that class's main method. The method declaration must look like the following:

```
public static void main(String args[])
```

Parameter `-ea`:

```
-enableassertions["..." | : ]
```

```
-ea["..." | : ]
```

Enable assertions. Assertions are disabled by default.

With no arguments, `enableassertions` or `-ea` enables assertions.

Note 3:

An assertion is a statement in the Java™ programming language that enables you to test your assumptions about your program.

Each assertion contains a boolean expression that you believe will be true when the assertion executes. If it is not true, the system will throw an error.
