QUESTION 1

You are the architect of a JEE-based product that customers can configure to meet their own security requirements. You want to enforce basic without sacrificing customers ability to customize the product.

Which is the best method to support both requirements?

A. Define base roles and users declaratively

B. Define base roles and users programmatically

C. Build a custom security service to handle authorization

D. Customize the JRE sandbox model by using local variables

Correct Answer: C

QUESTION 2

Your development team wants to use Google Guice. A previous architect assigned this request a low priority, citing the complexity of integration and no compelling benefits statements from the requesting team.

The team claims that their colleagues have achieved the integration using a pattern. This pattern reduced the level of difficulty and risk and did not require vendor support.

Which pattern fits this description?

A. Context Holder

B. Service Starter

C. Dependency Injection Extender

D. Bean Locator

Correct Answer: C

QUESTION 3

Which three actions represent best practices when implementing an exception handling strategy for an application?

A. Create a custom checked exception if an alternative action can be taken to resolve the exception.

B. Create a custom unchecked exception if the action to resolve the exception cannot be defined.

C. Always log the specific exception before re-throwing a wrapped exception.

D. Always throw exceptions in methods that are designed for exception handling.

E. Always include information specific to the error when logging an exception.

Correct Answer: ABE

QUESTION 4

You are the architect for XYZ bank. XYZ is redesigning their online banking offering and you need to ensure that the new design follows security best practices for the JEE platform.

Select three security best practices for JEE applications.

A. Schedule regular penetration testing.

B. Log all security related application events.

C. Implement an exception-handling strategy.

D. Encrypt data, both on the wire and at rest.

E. Use both programmatic and declarative security.

F. Treat users as untrusted even when authenticated. 100% Real QandAs | 100% Real Pass

Correct Answer: BCE

QUESTION 5

Which two features are supported by the Java Authentication and Authorization Service (JAAS) API?

A. Single sign on

B. Secure network connections

C. Configurable access control policies

D. Web services security

E. Message encryption and key generation

Correct Answer: AC
