QUESTION 1

The Java Persistence API defines a notion of propagation of a persistence context. Which statement is correct?

- A. Persistence context propagation is NOT supported for message-driven beans.
- B. Persistence context propagation is supported for any type of an entity manager.
- C. Persistence context propagation avoids the need for the application to pass references of entity manager instances.
- D. Persistence context propagation results in cloning of all managed instances for use by another instance of an entity manager.

Correct Answer: C

QUESTION 2

Which three statements are true about EJB 3.0 containers? (Choose three.)

- A. Remote argument passing semantics conform to Java RMI-IIOP.
- B. The JAXB 2.0 API is guaranteed to be available for all bean types.
- C. The Java 2D API is guaranteed to be available for session beans.
- D. javax.naming.InitialContext is guaranteed to provide a JNDI name space.
- E. The Java Telephony API is guaranteed to be available for session and message beans.
- F. javax.transaction.UserTransaction cannot be used by beans when bean-managed transaction demarcation is used.

Correct Answer: ABD

QUESTION 3

A User entity is in a one-to-many relationship with a Book entity. In other words, a developer can reach the collection of books that a User instance myUser has by using the path expression "myUser.books". A developer wants to write a Java Persistence query that returns all users that have only two books. Which two are valid queries that return this information? (Choose two.)

- A. `SELECT u FROM User u WHERE SIZE(u.books) = 2`
- B. `SELECT u FROM User u WHERE COUNT(u.books) = 2`
- C. `SELECT u FROM User u WHERE (SELECT COUNT(b) FROM u.books b) = 2`
- D. `SELECT u FROM User u WHERE (SELECT SIZE(b) FROM u.books b) = 2`

Correct Answer: AC

QUESTION 4

A session bean's business method throws an exception during execution. Which two are responsibilities of the Bean Provider when throwing the exception? (Choose two.)

- A. For application exceptions, ensure that if the current transaction commits there will be no loss of data integrity.
- B. For application exceptions, ensure that the current transaction will commit.
- C. For system errors, when the client is remote, throw a `java.rmi.RemoteException` that wraps the original exception.
- D. For checked exceptions from which the bean cannot recover, throw an `EJBException` that wraps the original exception.

Correct Answer: AD

QUESTION 5

A developer is declaring a persistent entity that will be passed as a detached object through a remote interface to an application client. Which two characteristics must the corresponding persistent entity class have? (Choose two.)

- A. implement serializable
- B. include a no-arg constructor
- C. make instance variables public
- D. implement the remote interface

Correct Answer: AB
