QUESTION 1

Which statement about an entity instance lifecycle is correct?

- A. A new entity instance is an instance with a fully populated state.
- B. A detached entity instance is an instance with no persistent identity.
- C. A removed entity instance is NOT associated with a persistence context.
- D. A managed entity instance is the instance associated with a persistence context.

Correct Answer: D

QUESTION 2

A developer wants to use the Java Persistence query language. Which two are true? (Choose two.)

- A. A WHERE clause is required in every query.
- B. The WHERE clause can restrict the scope of a delete operation.
- C. The WHERE clause can be used to order the results returned by a query.
- D. The WHERE clause is used to determine the types of objects to be retrieved from a persistent store.
- E. The WHERE clause is used to restrict the contents of a collection of objects that are returned from a query.

Correct Answer: BE

QUESTION 3

Using bean-managed transaction demarcation, under which two circumstances must the container roll back a transaction? (Choose two.)

- A. A stateful session bean invokes `UserTransaction.rollbackOnly`.
- B. A stateful session bean throws an uncaught application exception from a business method.
- C. A stateful session bean begins a transaction in a business method but does NOT complete it before returning.
- D. A stateless session bean begins a transaction in a business method but does NOT complete it before returning.
- E. A message-driven bean begins a transaction in a message listener method but does NOT complete it before returning.

Correct Answer: DE

QUESTION 4

Given:

A session bean Foo uses container-managed transactions. The container throws a `javax.transaction.TransactionRolledBackException` when the `doStuff` method runs. Which transaction attribute can the `doStuff` method have for this to occur?

- A. NEVER
- B. MANDATORY
- C. REQUIRES_NEW
- D. NOT SUPPORTED

Correct Answer: B

QUESTION 5

A developer writes an interceptor class called `FoolInterceptor` containing the following `AroundInvoke` method:

11.

```
@AroundInvoke
```

12.

```
public Object intercept(InvocationContext ctx) {
```

13.

```
    return "intercepted";
```

14.}

`FoolInterceptor` is applied to a business method in a stateless session bean:

11.

```
@Interceptors({FoolInterceptor.class})
```

12.

```
public String testzero(int i) {
```

13.

```
    return (i == 0) ? "zero" : "not zero";
```

14.

}

Which describes the result when a client invokes the test zero method with a value of 1?

- A. The intercept method is NEVER invoked.
- B. The client receives a return value of "zero".
- C. The client receives a return value of "not zero".
- D. The client receives a return value of "intercepted".

Correct Answer: D
