QUESTION 1

You have been asked to develop business methods for an enterprise bean to fulfill the following objective:

If the JDBC connection is NOT available, the current state of the shopping cart session must be serialized. A serialized state must be written to a text file using a `java.io.PrintWriter`. Data must be shared with a Web services end point. Logging

information must be displayed in `javax.swing.JPanel` component. Which is true?

- A. The requirements can be fulfilled only in session beans.
- B. The requirements can be fulfilled only in message-driven beans.
- C. All of the requirements can be fulfilled using either session beans or message-driven beans.
- D. None of the requirements can be fulfilled using either session beans or message-driven beans.
- E. Both session beans and message-driven beans can fulfill some but not all of the requirements.

Correct Answer: E

QUESTION 2

Which must result in the destruction of a stateful session bean?

- A. A client calls an `@Remove` method and the method returns successfully.
- B. The server in which the stateful session bean was created is restarted.
- C. The stateful session bean participates in a transaction that is rolled back.
- D. The stateful session bean is chosen as a last recently used (LRU) victim for passivation.

Correct Answer: A

QUESTION 3

A developer wants to create a Java Persistence query that will include a subquery. Which three are true? (Choose three.)

- A. Subqueries can be used in a FROM clause.
- B. Subqueries can be used in a WHERE clause.
- C. The ANY expression can be used only with a subquery.

- D. The EXISTS expression can be used only with a subquery.
- E. The MEMBER expression can be used only with a subquery.

Correct Answer: BCD

QUESTION 4

A Java Persistence application uses the EntityManager.flush method to synchronize the current persistence context with the database. Which two statements are correct? (Choose two.)

- A. The flush method might cause the persist operation to be cascaded to related entities.
- B. Extensive use of the flush method decreases the performance of a Java Persistence application.
- C. The flush method should be used to synchronize the current persistence context with modifications made in other transactions.
- D. The flush method should be used to publish changes done in the current persistence context to other transactions before actual transaction commit.

Correct Answer: AB

QUESTION 5

Which statement is true about the Timer service in an EJB 3.0 stateless session bean?

- A. The timeout callback method contains the business logic that handles the timeout event.
- B. The timeout callback method must be declared as a business method in business interfaces.
- C. The timeout callback method can throw application exceptions to report business logic failures.
- D. A bean class can implement multiple timeout callback methods, each associated with a different timer.

Correct Answer: A
