QUESTION 1

Given an EJB 3.0 J MS message-driven bean, which statement is true about its exception handling?

A. Its message listener method must NOT throw any checked exception.

B. Its message listener method can throw java. rmi. RemoteException.

C. Its message listener method can throw any checked exception except java. rmi. RemoteException.

D. Its message listener method can throw any checked exception that implements java. io.Serializable.

Correct Answer: A

QUESTION 2

A stateful session bean contains a number of instance variables. The types of instance variables A and B are NOT serializable. Instance variable B is a complex type which is populated by many business calls, and can, therefore, NOT be refilled by the client without starting all over. A helper instance variable C is defined as having a Serializable type, and can hold all the information which is in variable B. For example, B is of type XML-DOM Tree and C of type String. Which two solutions, when combined, maintain the state of the session bean over a passivation and activation by the container? (Choose two.)

A. The value of helper variable C is used to create the value ofinstancevariableBin the beans noarg constructor.

B. Thevalueofhelper variable C is usedtocreate the value ofinstancevariableBin a @PostCreate annotated method.

C. The value ofhelpervariable C isusedto create the value of instance variableBin a@PostActivate annotated method.

D. Instancevariable A must be made null and instance variable B mustbeconverted toaSerializable type and assigned to anotherinstancevariable in a @PreDestroy annotated method.

E. Instance variableAmustbedefinedtransient.Instance variableBmustbe convertedtoaSerializable type,set to null,and assigned totheinstancevariableC ina@PrePassivate annotatedmethod.

Correct Answer: CE

QUESTION 3

A developer implements a system in which transfers of goods are monitored. Each transfer needs a unique ID for tracking purposes. The unique ID is generated by an existing system which is also used by other applications. For perfomance reasons, the transaction that gets the unique ID should be as short as possible. The scenario is implemented in four steps which are implemented in four business methods in a CMT session bean:

1.

LcheckGoods

2.

Checks goods in a database

2.

getUniqueId Retrieve the unique ID

3.

checkAmount Checks the amount in a non-transactional system

4.

storeTransfer Stores the transfer in a database as part of the calling transaction. These methods are called by the addTransfer method of a second CMT session bean in the following order: checkGoods, getUniqueId, checkAmount, storeTransfer Assuming no other transaction-related metadata, which is the correct set of transaction attributes for the methods in the session beans?

A. 0. addTransfer REQUIRED

1.

LcheckGoods REQUIRED

2.

getUniqueldREQUIRES_NEW

3.

checkAmountsNOT_SUPPORTED

4.

storeTransferMANDATOR Y

B. 0. addTransferREQUIRED

2. LcheckGoods REQUIRED

2.

getUniqueldREQUIRED

3.

checkAmountsREQUIRED

4.

storeTransferREQUIRED

C. 0.addTransferREQUIRED

1.

LcheckGoods REQUIRED

2.

getUniqueldREQUIRES_NEW

3.

checkAmountsNEVER

4.

storeTransferMANDATOR Y

D. 0. addTransferNOT_SUPPORTED

1.

LcheckGoods REQUIRED

2.

getUniqueldREQUIRED

3.

checkAmountsNOT_SUPPORTED

4.

storeTransferMANDATORY

Correct Answer: A

QUESTION 4

Your application uses the Java Persistence API to access a database. This application must reject adding an instance to the database if it does NOT pass validation tests for values of two persistence properties. The database contains some data that will NOT pass such validation. Only the new records must be validated. Which option will achieve this behavior?

A. Add validation logic tothesetter methods for each property.

B. AddthePrePersist callbackmethodwithallofthevalidation logic.

C. Addthe PostPersist callback methodwithall ofthevalidation logic.

D. AddPrePersist and PreUpdate callback methods with allofthe validation logic.

Correct Answer: B

QUESTION 5

Given:

11.©Entity public class X{

12.

@Id int id;

13.

Y y; 14.}

A public class Y with NO Java Persistence annotations is defined in the same package.

Which statement is correct about these classes if NO other annotations and mapping descriptors are provided?

A. Class Y must be serializable.

B. ClassYmust be marked as an entity.

C. The entity X is notdefinedcorrectly.The field y must be marked as @Lob.

D. ClassY must be accessedbyapersistenceapplication throughapublicinterface.

Correct Answer: A
