- ⚙️ **800,000+** Satisfied Customers

### QUESTION 1

An automobile manufacturer publishes a Web service for use by their suppliers. The manufacturer has stringent security requirements that require suppliers to verify their identity. Data integrity and confidentiality must be maintained between the client and the server. Which two meet all of these requirements? (Choose two.)

- A. X.509 and XKMS
- B. XACML and XKMS
- C. SSL and mutual authentication
- D. XML Encryption and XML Digital Signature
- E. Private network and XML Signature

Correct Answer: CD

---

### QUESTION 2

A company is refactoring an existing website to use Web services clients. The application retrieves lists of parts and displays them to the users in a browser window. Previously, the data was stored as files on the web server and, in order to access the files, the user would simply click on a hyperlink. Now the data must be dynamically generated via a service that another developer has created. They want the easiest way to refactor their website to use Web services. Which three technologies should they use? (Choose three.)

- A. SOAP
- B. REST
- C. Javascript
- D. XML
- E. JSON
- F. Java

Correct Answer: BCE

---

### QUESTION 3

A developer is analyzing an existing Web service with performance problems. The analysis reveals the service employs SOAP over HTTP. When the size of the encoded binary files grew with changing business requirements, the service slowed. What are two effective solutions for this problem? (Choose two.)

- A. Separating the XML and binary content with WS-Filtering implemented in WSIT will improve efficiency.
- B. XML documents larger than 1 KB with binary encoding should be optimized.
- C. WS-Addressing can ease congestion by routing messages over other protocols.

- D. For existing services, the most effective solution is to increase the available bandwidth.
- E. MTOM can reduce both processing and bandwidth required by SOAP with attachments.

Correct Answer: BE

---

#### QUESTION 4

Which two statements are true about the Web services? (Choose two.)

- A. SOAP messages are compressed during transport.
- B. You must implement session tracking via HTTP cookies.
- C. The WSDL defines services as collections of network endpoints.
- D. All data shared between Java and non-Java components must be in XML format.
- E. Data interchange is standardized in XML.
- F. Stateful Web services must be implemented in a heterogeneous environment.

Correct Answer: CE

---

#### QUESTION 5

RESTful Web services have an interface of well-known standard operations, and all services are accessed through this interface. What are the four standard operations available for RESTful Web services? (Choose four.)

- A. GET
- B. CONNECT
- C. PUT
- D. SUBMIT
- E. POST
- F. HEAD
- G. DELETE

Correct Answer: ACEG
