### QUESTION 1

Click the Exhibit button.

A DNS zone file is shown in the exhibit. The configuration for this domain is removed from the primary server, but the secondary server is not modified.

How long after the domain is removed from the primary server will the secondary server stop returning authoritative replies for this domain?

```
$TTL 8h
@      IN SOA      ns1.mydomain.com.
hostmaster.mydomain.com. (
        2005010101 : serial
        1H         : refresh
        15M        : retry
        10D        : expiry
        30M        : minimum
)

IN NS  ns1.mydomain.com.
IN NS  ns2.mydomain.com.

www    IN A      192.168.1.1
```

- A. approximately 15 minutes after
- B. immediately
- C. approximately 30 minutes after
- D. approximately 1 hour after
- E. approximately 10 days after

Correct Answer: E

### QUESTION 2

Place the address fields of an aggregatable global unicast address in the correct order.

Select and Place:

Place the address fields of an aggregatable global unicast address in the correct order.

**Aggregatable Global Address Format**

**Address Fields**

Correct Answer:

Place the address fields of an aggregatable global unicast address in the correct order.

**Aggregatable Global Address Format**

**Address Fields**

**QUESTION 3**

A system on your network, which runs HTTP services, has link-based IPMP configured on two Ethernet interfaces (eri0 and eri1). Due to a future re-cabling of your site, you must test the IPMP configuration by taking the eri0 interface offline and failing network access over to the eri1 interface.

Place the command used to force the failover in the space provided.

Note: Only one command is used.

Select and Place:

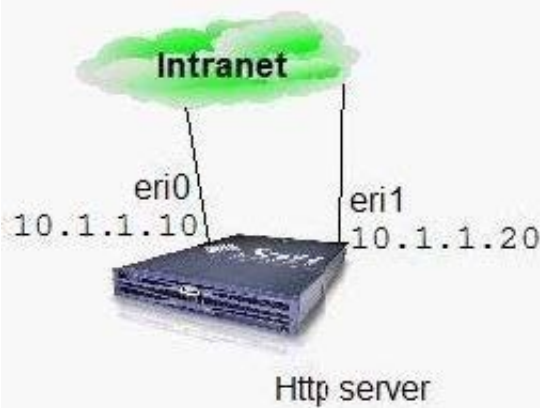

A system on your network, which runs HTTP services, has link-based IPMP configured on two Ethernet interfaces (eri0 and eri1).

Due to a future re-cabling of your site, you must test the IPMP configuration by taking the eri0 interface offline and failing network access over to the eri1 interface.

Place the command used to force the failover in the space provided. Note: Only one command is used.

**Commands**

Correct Answer:

A system on your network, which runs HTTP services, has link-based IPMP configured on two Ethernet interfaces (eri0 and eri1).

Due to a future re-cabling of your site, you must test the IPMP configuration by taking the eri0 interface offline and failing network access over to the eri1 interface.

Place the command used to force the failover in the space provided. Note: Only one command is used.

#### Commands

`ifconfig eri0 failover`

`ifconfig -f eri0`

`if_mpadm -d eri0`

`if_mpadm -f eri0`

`if_mpadm -r eri0`

Done

#### QUESTION 4

A Sun UltraSparc machine is being configured for network access. Place the possible value of the "localmac-address?" OBP variable on its definition. Note: Not all definitions are used.

Select and Place:

A Sun UltraSparc machine is being configured for network access. Place the possible value of the "local-mac-address?" OBP variable on its definition. Note: Not all definitions are used.

**Definition or Effect**

- to ensure that other OBP variables are set properly
- to specify that the MAC address is obtained from the network
- to allow network cards to use their own Ethernet addresses
- to ensure that the machine's default Ethernet address is used for all interfaces

**local-mac-address?**

**Value**

Correct Answer:

A Sun UltraSparc machine is being configured for network access. Place the possible value of the "local-mac-address?" OBP variable on its definition. Note: Not all definitions are used.

**Definition or Effect**

- to ensure that other OBP variables are set properly  1
- to specify that the MAC address is obtained from the network  2
- to allow network cards to use their own Ethernet addresses  True
- to ensure that the machine's default Ethernet address is used for all interfaces  False

**local-mac-address?**

**Value**

Done

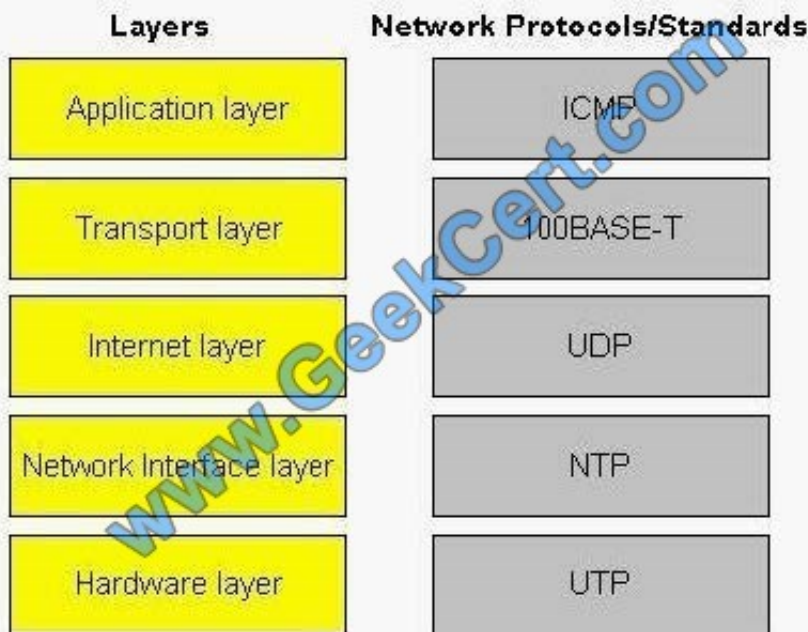

**QUESTION 5**

Place each TCP/IP protocol or standard on its corresponding layer of the model.

Select and Place:

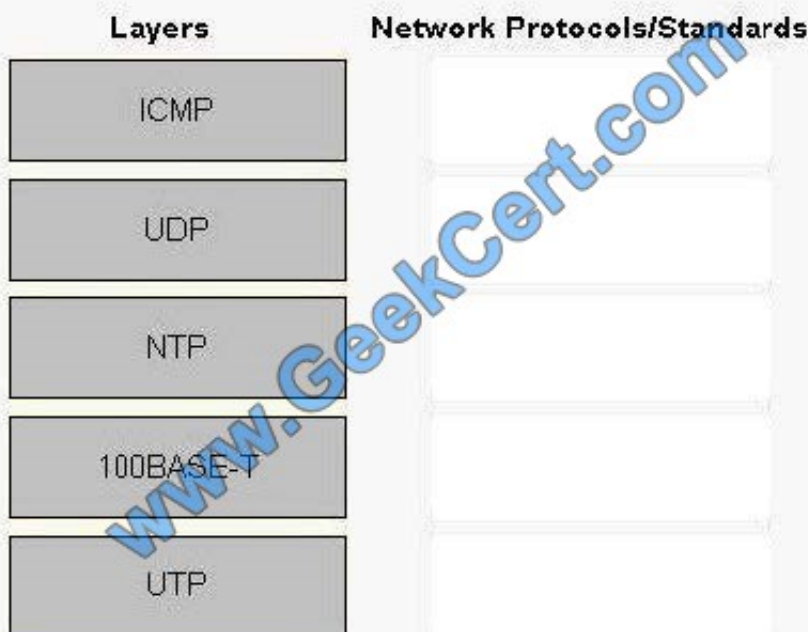

Place each TCP/IP protocol or standard on its corresponding layer of the model.

Correct Answer:

Place each TCP/IP protocol or standard on its corresponding layer of the model.
