QUESTION 1

You have taken over administration of a web server which is connected to the Internet. The server was installed using a minimized installation of Solaris, and has been hardened using the Solaris Security Toolkit. Which statement is correct?

- A. smpatch can be used to apply relevant patches.
- B. Solaris Security Toolkit will apply new patches as required.
- C. Only the kernel patch is required, because it has been minimized.
- D. Regular patching of the system is NOT required, because it has been hardened.

Correct Answer: A

QUESTION 2

Which two tasks can you perform using the Audit facility? (Choose two.)

- A. generate an overview of CPU usage by users
- B. generate an overview of disk space occupied by a particular user
- C. generate an overview of which users recently changed their password
- D. generate an overview of the network bandwidth in use by a particular user
- E. generate an overview of all the applications executed by a particular user

Correct Answer: CE

QUESTION 3

A system administrator suspects that `/etc/passwd` or `/etc/shadow` has been modified without proper authorization. Which two methods or programs can be used to find out whether that happened? (Choose two.)

- A. bart
- B. pkgchk
- C. pwdsign
- D. file system backups
- E. the Solaris Fingerprint Database

Correct Answer: AD

QUESTION 4

The kernel calculates the effective set of privileges based on three other privilege sets. This calculation begins with the set of privileges inherited from the parent process. The effective set is then further constrained by two other sets of privileges. Which two describe the remaining privilege sets? (Choose two.)

- A. Permitted set - a subset of the inheritable set
- B. Limit set - the outside limit of privileges available to the process
- C. Basic set - the privileges which define the system security policy
- D. Implicit set - the set of privileges required by a process to function correctly
- E. Disallowed set - the set of privileges specifically withheld in the process owner's profile

Correct Answer: AB

QUESTION 5

A user tries to log in to a system using ssh and receives this message: The authenticity of host 'example-01 (1.2.3.4)' can't be established. RSA key fingerprint is 00:11:22:33:44:55:66:77:88:99:aa:bb:cc:dd:ee:ff. Are you sure you want to continue (yes/no)? Why is this message being generated?

- A. The user has never logged into example-01.
- B. The ssh-agent command is not running on the client machine.
- C. The user has entered an invalid password when trying to log into example-01.
- D. example-01 has changed its host key since the last time the user has logged into the system.

Correct Answer: A
