QUESTION 1

The cluster administrator wants to disable the BREAK signal on the serial port. Which file needs to be edited?

- A. /etc/hosts
- B. /etc/nobreak
- C. /etc/default/kbd
- D. /etc/setkeyswitch

Correct Answer: C

QUESTION 2

In a two-node cluster, you specifically want to assign the shared disk with the highest `c##d##` as the quorum device. Which two methods will allow you to get this disk properly assigned as the quorum device? (Choose two.)

- A. Specify which disk you want assigned as the quorum device as you run `scinstall`.
- B. Choose during `scinstall` to disable automatic quorum device selection. Once both nodes are booted into the cluster, use `clsetup` to choose the quorum device and to reset `installmode`.
- C. Allow `scinstall` to automatically configure the quorum device. Once both nodes are booted into the cluster, use `clsetup` first to add a second quorum device and then to remove the original one.
- D. Allow `scinstall` to automatically configure the quorum device. Once both nodes are booted into the cluster, use `clsetup` first to remove the original quorum device and then to add your chosen one.

Correct Answer: BC

QUESTION 3

Which component of Sun Cluster 3.2 provides global naming consistency for shared storage?

- A. the CCR
- B. the RGM
- C. DID devices
- D. PxFS

Correct Answer: C

QUESTION 4

D. 1) Shutdown the cluster and boot all nodes in single-user non-cluster mode. 2) Modify the cluster infrastructure file on all nodes and amend the necessary properties as specified. 3) Reboot the nodes into multi-user cluster mode.

Correct Answer: C

QUESTION 5

When using ZFS within the cluster, the cluster administrator should mirror the data across controller paths. Each node should have at least two separate paths to shared storage. How does the cluster administrator ensure that the paths are identical on each node so the ZFS pool can fail over without any problems?

- A. Do nothing. Even if the path names are different on each node, zpools can still fail over.
- B. ZFS automatically renames disk path names to ensure that they are identical on each node.
- C. Use the DID paths.
- D. Manually ensure that each controller has the same number on each node.

Correct Answer: A
