QUESTION 1

Which of the following is NOT a correct way of configuring handlers on a Web Service client ? (Choose one)

- A. Specify the handlers in jaxws-catalog.xml and make it available in the classpath of the client
- B. Create a handlerchain as list of handlers and call setHandlerChain() with that list on the Binding object.
- C. Programmatically configure the handlers by setting a custom HandlerResolver on the service instance and create proxies from that service.
- D. Specify handlers in handler chain configuration XML file and add @HandlerChain referencing handler configuration file to the Web Service references for clients running in JavaEE Container.

Correct Answer: A

QUESTION 2

Which security technologies are not included in WS-Security?

- A. encryption
- B. handshake for credential exchange and session establishment
- C. security tokens
- D. digital signatures

Correct Answer: B

QUESTION 3

XML Signature and XML Encryption provide the foundation for message level security in Web services. Which statement about XML signature is NOT true?

- A. use detached signatures, where the digital signature covers sibling elements or external data
- B. use enveloping signatures, where the digital signature element encloses the data to be signed
- C. use enveloping signatures, where the digital signature is a child element of the data to be signed
- D. use enveloped signatures, where the digital signature is a child element of the data to be signed

Correct Answer: C

QUESTION 4

A developer is asked to determine which Web services approach is correct for a new project. A SOAP-based Web service must be created and deployed in an environment where many customers will use it. These customers will be

responsible for developing their own clients using different frameworks, based on the published WSDL. Which approach is correct to use first in this situation? (Choose one)

- A. Java, because the WSDL generated later will be more accurate
- B. WSDL, because the service and customers can benefit from the strongly typed schema
- C. Java, because the service must be efficient to support many customers
- D. WSDL, because tools allow existing classes to be easily mapped without modification

Correct Answer: B

QUESTION 5

A purchase order Web service is designed to be synchronous, request-response, and HTTP- based. The existing service processes the request immediately. Because of new business requirements, the service can take up to ten days to perform a credit check before processing the order. Which two design changes should be made? (Choose two.)

- A. The client needs to use dynamic proxies instead of stubs.
- B. The client needs to develop and deploy a Web service to accept callbacks.
- C. The service only needs to change the WSDL from rpc-literal to document-literal.
- D. The client and the service need to establish a mechanism to correlate the messages.
- E. Given delays of up to ten days, a polling strategy is more efficient than callback.

Correct Answer: BD
