QUESTION 1

In Oracle Application Container Cloud Service, you deployed a worker application which you now want to expose using a public URL.

Which statement is true?

- A. Use the Deployment section in UI to un-check the worker application check box and restart the application.
- B. This is not possible in Oracle Application Container Cloud Service.
- C. Delete the worker application, remove the "type":"worker" entry in the manifest.json and redeploy the application.
- D. Remove the "type":"worker" entry in the manifest.json and redeploy the application.

Correct Answer: B

QUESTION 2

What do you need to run Visual Builder Cloud Service (VBCS)?

- A. All you need is download and install the Java client side program from OTN on your desktop.
- B. It needs Java Cloud Service as a prerequisite.
- C. It needs JDeveloper installed on your system to write applications.
- D. It runs right in your browser.

Correct Answer: B

QUESTION 3

One of the key benefits of Oracle Java Cloud Service is "self-service".

Which two operations can you perform for a Java Cloud Service instance in Oracle Cloud Infrastructure Classic?
(Choose two.)

- A. Add a WebLogic Server cluster.
- B. Uninstall the load balancer, if enabled.
- C. Change the WebLogic Server edition and version of the instance.
- D. Change the shape of a node.
- E. Decrease block storage.

Correct Answer: AB

QUESTION 4

Which two statements about backups in Oracle Java Cloud Service are false? (Choose two.)

- A. Java Cloud Service can disable backups automatically after a failure.
- B. Java Cloud Service backs up the WebLogic Server software installation.
- C. You cannot perform a scaling operation while a backup operation is in progress.
- D. On-demand backups are always incremental backups.
- E. Java Cloud Service backs up the WebLogic Server domain configuration.
- F. You can customize the schedule at which Java Cloud Service automatically takes backups.

Correct Answer: CD

QUESTION 5

When you create a Java Cloud Service instance, which design approach will allow you to use two-factor authentication to protect the applications deployed on the instance?

- A. Create the instance with Identity Cloud Service enabled as the authentication provider, and configure two-factor authentication in Identity Cloud Service.
- B. Create the instance with Identity Cloud Service enabled as the authentication provider, and configure two-factor authentication in the Java Cloud Service web console.
- C. Create the instance with Identity Cloud Service enabled as the authentication provider, and configure two-factor authentication in the WebLogic Server administration console.
- D. Create the instance with Identity Cloud Service disabled, and configure two-factor authentication in the WebLogic Server administration console.

Correct Answer: D
