QUESTION 3

While creating a business model what advanced options you can enable or disable? (Choose three)

- A. Business Object Security Feature
- B. Analytic View Transparency View
- C. Autonomous Aggregate Cache
- D. Display private tables
- E. Analytic View Base Table Query Transformation

Correct Answer: BCE

Creating and Editing Business Models

From the Business Models page, you can create a business model and view information about it. You can also edit a business model and perform other actions on it.

When you create a business model, you identify a fact table that contains the data to inspect. The Business Model creation tool looks at the contents of that table, identifies any hierarchies in the fact table, and searches for other tables that may contain related hierarchies. It then suggests a business model to which you can make any desired adjustments.

While creating a business model, you can enable or disable the following advanced options:

- Autonomous Aggregate Cache, which uses the dimensional metadata of the business model to manage a cache and can improve query response times.
- Analytic View Transparency Views, which presents analytic views as regular database views and enables you to use your analytic tools of choice while gaining the benefits of analytic views.
- Analytic View Base Table Query Transformation, which enables you to use your existing reports and applications without requiring changes to them.
