QUESTION 1

While Autonomous Transaction Processing and Autonomous Data Warehouse use the same Oracle database, which statements are true about the workloads?

- A. Autonomous Transaction Processing memory usage optimizes workloads for parallel joins and aggregations.
- B. Autonomous Data Warehouse workloads are optimized for mixed workloads.
- C. Autonomous Transaction Processing workloads are optimized for data warehouse, data mart, and data lake.
- D. Data that is bulk loaded, by default, uses the row format in Autonomous Transaction Processing where Autonomous Data Warehouse data format is columnar.

Correct Answer: D

QUESTION 2

An Autonomous Database (ADB) user with an instance wallet has left the company and they shared a database user id with other users when accessing ADB.

Other than changing the shared user password, what can the admin do to protect the instance?

- A. Trust the user who left to not access the database.
- B. Shutdown and restart the instance.
- C. Rotate the instance wallet and share the new wallet with the remaining users.
- D. Delete the user.

Correct Answer: C

Rotate Wallets for Autonomous Database

Wallet rotation lets you invalidate existing client certification keys for a database instance or for all Autonomous Database instances in a region.

You may want to rotate wallets for any of the following reasons:

- If your organization's policies require regular client certification key rotation.
- When a client certification key or a set of keys is suspected to be compromised.

There are two options for client certification key rotation:

- Per-database with **Instance Wallet** selected:
 - For the database whose certification key is rotated, any existing database specific instance wallets will be void. After you rotate a wallet you have to download a new wallet to connect to the database.
 - Regional wallets containing all database certification keys continue to work.
 - All user sessions are terminated for the database whose wallet is rotated. User session termination begins after wallet rotation completes, however this process does not happen immediately.
- Regional level with **Regional Wallet** selected:
 - For the region whose certification key is rotated, both regional and database specific instance wallets will be void. After you rotate a wallet you have to download new regional or instance wallets to connect to any database in the region.
 - All user sessions are terminated for the databases in the region whose wallet is rotated. User session termination begins after wallet rotation completes, however this process does not happen immediately.

QUESTION 3

When integrating object storage with autonomous database how effectively oracle uses the files in the object storage?

- A. Scan partition tables
- B. scan hybrid partition tables
- C. prun column in parquet files
- D. prun columns in csv files

Correct Answer: A

QUESTION 4

Which two methods can you use to create users and grant roles in Autonomous Database services? (Choose two.)

- A. through the Oracle Cloud Infrastructure service console
- B. through SQL/Developer s
- C. using DBMS_CLOUD_ADMIN package
- D. through SQLPlus

Correct Answer: BD

"To create users in your database, connect to the database as the ADMIN user using any SQL client tool." <https://docs.oracle.com/en/cloud/paas/autonomous-data-warehouse-cloud/user/manage-userscreate.html#GUID-54CA837B-CD6A-4ED2-A960-5874535818CB>

QUESTION 5

Which statement is true when the Autonomous Database has auto scaling enabled?

- A. Database concurrency is scaled up when needed by the workload.
- B. Increases the number of sessions available to the database.
- C. Scales the PGA and SGA size when needed for the workload.
- D. Enables the database to use up to 3x CPU/IO resources immediately when needed by the workload.

Correct Answer: D
