QUESTION 1

You need to create a new database via the Oracle Cloud Infrastructure (OCI) CLI with the following requirements:

Autonomous Transaction Processing License Included Shared Infrastructure

Which parameter would you NOT use?

- A. db-workload
- B. is-dedicated
- C. db-type
- D. license-model

Correct Answer: B

https://docs.oracle.com/en-us/iaas/tools/oci-cli/2.9.9/oci_cli_docs/cmdref/db/autonomousdatabase/create.html

QUESTION 2

Which three statements are true about procedures in the DBMS_CLOUD package? (Choose three.)

- A. The DBMS_CLOUD.PUT_OBJECT procedure copies a file from Cloud Object Storage to the Autonomous Data Warehouse.
- B. The DBMS_CLOUD.CREATE_CREDENTIAL procedure stores CloudObject Storage credentials in the Autonomous Data Warehouse database.
- C. The DBMS_CLOUD.VALIDATE_EXTERNAL_TABLE procedure validates the source files for an external table, generates log information, and stores the rows that do not match the format optionsspecified for the external table in a badfile table on Autonomous Data Warehouse.
- D. The DBMS_CLOUD.DELETE_FILE procedure removes the credentials file from the Autonomous Data Warehouse database.
- E. The DBMS_CLOUD.CREATE_EXTERNAL_TABLE procedure creates anexternal table on files in the cloud. You can run queries on external data from the Autonomous Data Warehouse.

Correct Answer: BCE

DELETE_FILE Procedure

This procedure removes the specified file from the specified directory on Autonomous Data Warehouse.

CREATE_CREDENTIAL Procedure

This procedure stores Cloud Object Storage credentials in the Autonomous Data Warehouse database.

Use stored credentials for data loading or for querying external data residing in the Cloud.

PUTJDBJECT Procedure

This procedure copies a file from Autonomous Data Warehouse to the Cloud Object Storage. The maximum file size allowed in this procedure is 5 gigabytes (GB).

VALIDATE_EXTERNAL_TABLE Procedure This procedure validates the source files for an external table, generates log information, and stores the rows that do not match the format options specified for the external table in a badfile table on Autonomous Data Warehouse. **CREATE_EXTERNAL_TABLE Procedure** This procedure creates an external table on files in the Cloud. This allows you to run queries on external data from Autonomous Data Warehouse.

To use Data Pump from ADB, a credential identifying the Object Storage bucket to use must be defined with a `DBMS_CLOUD.CREATE_CREDENTIAL` function. This will allow ADB to access objects that are stored in the object store, including dump files. To export an existing database to prepare for import into ADB, use the XTP command and add the `exclude` option for database functionality that is not recommended or supported in ADB. This will prevent errors during the import process. This process is not automatic. And if the logs are not moved, you will receive a warning when running the MDB that the logs are not there. In this example, we're moving the `log import.log` to object store with a `DBMS_CLOUD.PUT_OBJECT` command.

VALIDATE_EXTERNAL_TABLE Procedure This procedure validates the source files for an external table, generates log information, and stores the rows that do not match the format options specified for the external table in a badfile table on Autonomous Database. The overloaded form enables you to use the `operation_id` parameter. **PUT_OBJECT Procedure** This procedure copies a file from Autonomous Database to the Cloud Object Storage. The maximum file size allowed in this procedure is 5 gigabytes (GB). **DELETE FILE Procedure** This procedure removes the specified file from the specified directory on Autonomous Database. **CREATE_EXTERNAL_TABLE Procedure** This procedure creates an external table on files in the Cloud. This allows you to run queries on external data from Autonomous Database.

QUESTION 3

Which two methods can you use to create database users and grant roles in Autonomous Database services? O the Oracle Cloud Infrastructure A. service console

- A. SQL Developer
- B. the `DBMS_CLOUD_ADMIN` package
- C. SQL *Plus

Correct Answer: B

QUESTION 4

Which statement is true when connecting OCI Marketplace image to shared autonomous database?

- A. Compute Image and Shared ADB must be in same VCN and Subnet
- B. ADB must be configured with NSG
- C. ADB must be configured with Private endpoints
- D. Cannot connect OCI Market image to shared ADB

Correct Answer: A

QUESTION 5

Which statement is FALSE about Oracle Autonomous JSON Database?

- A. JSON data is stored natively in the database
- B. You can promote Autonomous JSON Database to Autonomous Transaction /Processing
- C. It supports NoSQL-style, document-centric application
- D. There is a 20 GB limit on JSON collection

Correct Answer: D
