QUESTION 1

Your company is developing a new database application in Oracle Cloud Infrastructure. You need to test application functionality including a hardware failure scenario. Since the application is still in the development phase, you want to minimize infrastructure costs.

Which database service deployment option meets this requirement?

- A. two node real application cluster (RAC) system
- B. Autonomous Data Warehouse (ADW) system as it provides auto fail over functionality
- C. two node bare metal system with data guard enabled
- D. single node bare metal system

Correct Answer: A

QUESTION 2

Which does NOT set a variable in Terraform?

- A. Passing the variable with a var statement to Terraform
- B. Setting the variable as key value pairs in a file in a subdirectory named tfvar
- C. A default value in the variable declaration within a TF plan file
- D. Setting the environment variable using a TF_VAR_ predicate in front of the variable name

Correct Answer: A

QUESTION 3

Which two statements are true about encryption on Oracle Cloud Infrastructure (OCI)? (Choose two.)

- A. By default, Object Storage and Block Storage are encrypted at rest.
- B. A customer is responsible for data encryption in all services of OCI.
- C. By default, DBCS offers an encrypted database.
- D. By default, NVMe drives are encrypted but the block volume service is not.

Correct Answer: AC

QUESTION 5

Which two statements about fault domains are true? (Choose two.)

- A. A fault domain is a grouping of hardware and infrastructure within an availability domain
- B. Each availability domain contains three fault domains
- C. A failed instance in a fault domain is automatically relaunched
- D. A fault domain is selected automatically based on usage data

Correct Answer: AB
