QUESTION 1

What is a navigation flow?

- A. Functionality that enables running multiple business rules in a predetermined sequence
- B. The application home page that users will see upon logging into the application
- C. A type of report that shows variances by geography
- D. A way to promote a plan to your supervisor

Correct Answer: B

Navigation flows give application designers control over how various roles, or groups, interact with the application. The Navigation Flow Designer enables you to customize the application interface. For example, you can change the names of the cards and clusters that display on the Home page and the order in which they are displayed. You can hide cards, create new cards, and group cards into clusters.

You can also customize the vertical and horizontal tabs that display on a card.
