### QUESTION 3

Which three values are applicable for the profile option - "Transaction Processing Mode" for subinventory transfer and interorganization transfer?

- A. Blind Processing
- B. Offline Processing
- C. Background Processing
- D. Sequential Processing
- E. Online Processing
- F. Concurrent Processing

---

Correct Answer: CEF

Transaction Processing Mode You can set processing control globally for all transactions or you can choose different options for each type of transaction. You establish the method of transaction processing by choosing one of the following options when you set up your TP:INV Transaction Processing Mode profile: On-line processing Processes transactions while you wait and returns control to you once it finishes. Background processing Returns control immediately to you. With this option, Oracle Inventory processes transactions on a periodic basis via the Inventory Transaction Manager. Immediate concurrent processing Spawns a concurrent process when you commit the transaction and returns control immediately to you, allowing you to continue working. Form level processing Processes transactions using the processing control option you choose for that particular type of transaction. You must also set the Inventory profile options for Inter-Organization Transfer, Miscellaneous Issue and Receipt, Receive Customer Return, Return to Customer, and Transfer Between Subinventories. If you are using Oracle Work-in-Process, you must set the WIP profile options Completion Material Processing, Completion Transaction Form, Material Transaction Form, Move Transaction, Operation Backflush Setup, and Shop Floor Processing.
