-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Which two are features of IPv6? (Choose two.)

- A. anycast
- B. broadcast
- C. multicast
- D. podcast
- E. allcast

Correct Answer: AC

IPv6 addresses are classified by the primary addressing and routing methodologies common in networking: unicast addressing, anycast addressing, and multicast addressing. A unicast address identifies a single network interface. The Internet Protocol delivers packets sent to a unicast address to that specific interface. An anycast address is assigned to a group of interfaces, usually belonging to different nodes. A packet sent to an anycast address is delivered to just one of the member interfaces, typically the nearest host, according to the routing protocol's definition of distance. Anycast addresses cannot be identified easily, they have the same format as unicast addresses, and differ only by their presence in the network at multiple points. Almost any unicast address can be employed as an anycast address. A multicast address is also used by multiple hosts, which acquire the multicast address destination by participating in the multicast distribution protocol among the network routers. A packet that is sent to a multicast address is delivered to all interfaces that have joined the corresponding multicast group.

QUESTION 2

How does a Cisco IP phone handle untagged traffic that it receives from an attached PC?

- A. It drops the traffic.
- B. It allows the traffic to pass through unchanged.
- C. It tags the traffic with the default VLAN
- D. It tags the traffic with the native VLAN.

Correct Answer: B

Untagged data traffic from the device attached to the Cisco IP phone passes through the Cisco IP phone unchanged, regardless of the trust state of the access port on the Cisco IP phone.

QUESTION 3

Which three commands must you enter to create a trunk that allows VLAN 20? (Choose three)

- A. Switch(config-if)#switchport mode dynamic auto
- B. Switch(config-if)#switchport mode trunk
- C. Switch(config-if)#switchport trunk allowed vlan 20
- D. Switch(config-if)#switchport mode dynamic desirable
- E. Switch(config-if)#switchport trunk encapsulation dot1q
- F. Switch(config-if)#switchport trunk native vlan 20

Correct Answer: BCE

QUESTION 4

A network administrator enters the following command on a router: logging trap 3. What are three message types that will be sent to the Syslog server? (Choose three.)

- A. informational
- B. emergency
- C. warning
- D. critical
- E. debug
- F. error

Correct Answer: BDF

The Message Logging is divided into 8 levels as listed below:

Level Keyword Description emergencies System is unusable alerts Immediate action is needed critical Critical conditions exist errors Error conditions exist warnings Warning conditions exist notification Normal, but significant, conditions exist informational Informational messages debugging Debugging messages

If you specify a level with the "logging trap level" command, that level and all the higher levels will be logged. For example, by using the "logging trap 3" command, all the logging of emergencies, alerts, critical, and errors, will be logged.

QUESTION 5

Drag and drop the QoS features from the left onto the correct descriptions on the right

Select and Place:

best effort	service level that provides basic connectivity without differentiation
CAR	service level that provides preferred handling
hard QoS	service level that provides reserved network resources
NBAR	identification tool ideal for handling web applications
PBR	polices traffic based on its bandwidth allocation
soft QoS	uses route maps to match traffic criteria

Correct Answer:

	best effort
	soft QoS
	hard QoS
	NBAR
	CAR
	PBR
