100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by Cisco
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Which statement about the IP SLAs ICMP Echo operation is true?

- A. The frequency of the operation .s specified in milliseconds.
- B. It is used to identify the best source interface from which to send traffic.
- C. It is configured in enable mode.
- D. It is used to determine the frequency of ICMP packets.

Correct Answer: D

This module describes how to configure an IP Service Level Agreements (SLAs) Internet Control Message Protocol (ICMP) Echo operation to monitor end-to-end response time between a Cisco router and devices using IPv4 or IPv6. ICMP Echo is useful for troubleshooting network connectivity issues. This module also demonstrates how the results of the ICMP Echo operation can be displayed and analyzed to determine how the network IP connections are performing. ICMP Echo Operation The ICMP Echo operation measures end-to-end response time between a Cisco router and any devices using IP. Response time is computed by measuring the time taken between sending an ICMP Echo request message to the destination and receiving an ICMP Echo reply. In the figure below ping is used by the ICMP Echo operation to measure the response time between the source IP SLAs device and the destination IP device. Many customers use IP SLAs ICMP-based operations, in-house ping testing, or ping-based dedicated probes for response time measurements.

The IP SLAs ICMP Echo operation conforms to the same IETF specifications for ICMP ping testing and the two methods result in the same response times. Configuring a Basic ICMP Echo Operation on the Source Device
SUMMARY STEPS

1. enable
2. configure terminal
3. ip sla operation-number
4. icmp-echo {destination-ip-address | destination-hostname} [source-ip {ip-address | hostname} | source-interface interface-name]
5. frequency seconds
6. end

QUESTION 2

Which WAN topology is most appropriate for a centrally located server farm with several satellite branches?

- A. star

- B. hub and spoke
- C. point-to-point
- D. full mesh

Correct Answer: B

Explanation:

In a Hub-and-spoke Site-to-Site Wide Area Network (WAN) network topology, one physical site act as Hub (Example, Main Office), while other physical sites act as spokes. Spoke sites are connected to each other via Hub site. In Hubandspoke Wide Area Network (WAN) topology, the network communication between two spokes always travels through the hub.

QUESTION 3

Which LLDP extension provides additional support for VoIP?

- A. TLV
- B. LLDP-MED
- C. LLDPv3
- D. LLDP-VOIP

Correct Answer: B

QUESTION 4

Drag and drop the IPv6 IP addresses from the left onto the correct IPv6 address types on the right.

Select and Place:

::	modified EUI-64
2020:1008:0:0:85AB:800:52:7348	multicast
D8:FC:93:FF:FE:D8:05:0A	unicast
FF01::1	unspecified

Correct Answer:

QUESTION 5

What is the danger of the permit any entry in a NAT access list?

- A. It can lead to overloaded resources on the router.
- B. It can cause too many addresses to be assigned to the same interface.
- C. It can disable the overload command.
- D. It prevents the correct translation of IP addresses on the inside network.

Correct Answer: A
