Correct Answer: D

QUESTION 3

An investigator is examining a copy of an ISO file that is stored in CDFS format. What type of evidence is this file?

- A. data from a CD copied using Mac-based system
- B. data from a CD copied using Linux system
- C. data from a DVD copied using Windows system
- D. data from a CD copied using Windows

Correct Answer: B

CDfs is a virtual file system for Unix-like operating systems; it provides access to data and audio tracks on Compact Discs. When the CDfs driver mounts a Compact Disc, it represents each track as a file. This is consistent with the Unix convention "everything is a file". Source: <https://en.wikipedia.org/wiki/CDfs>

QUESTION 4

What is a difference between a threat and a risk?

- A. A threat can be people, property, or information, and risk is a probability by which these threats may bring harm to the business.
- B. A risk is a flaw or hole in security, and a threat is what is being used against that flaw.
- C. A risk is an intersection between threat and vulnerabilities, and a threat is what a security engineer is trying to protect against.
- D. A threat is a sum of risks, and a risk itself represents a specific danger toward the asset.
