QUESTION 1

According to the VCE Logical Build guide, which command would you use to install the Cisco FNIC driver using the vSphere CLI in ESXi 5.0?

- A. vihostupdate.pl
- B. vicfg-vmknic
- C. vicfg-nics
- D. esxtop

Correct Answer: A

QUESTION 2

The PowerPathVE rpowermt server cannot reach a previously licensed ESXi host. Which two statements are true? (Choose two.)

- A. Multipathing functionality continues to be available on that host and IO continues to be load-balanced across all available paths.
- B. The multipathing policy is automatically reset to Basic Failover (BF) during the period that communication is not available.
- C. A new PowerPathVE license will need to be applied to the ESXi host after communication is restored.
- D. No changes to the PowerPathVE configuration can be made until connectivity is restored.

Correct Answer: AD

QUESTION 3

Active Directory (AD) is integrated on host ESXi01. You want to give some users an administrator role. To which group should the users be added?

- A. the ESX Admins group
- B. the Server Admin Active Directory group
- C. the ESX group
- D. the Admins group

Correct Answer: A

QUESTION 4

A customer requests that you join the management virtual machines to their domain, and modify the required services and databases to use a provided service account. After performing the requested actions, the VMware Update Manager plug-in will not enable and returns the following error: There was an error connecting to VMware vCenter Update Manager server name8084. Database temporarily unavailable or has network problems. The vpxclient.log contains the error shown below: Loaded plugin from C:\Program Files (x86)\VMware\Infrastructure\Virtual Infrastructure Client\Plugins\Update Manager 4.0\vimIntegrityClient.dll Extension.Key - com.vmware.vclIntegrity [Update MSoapTran] 2013-0715 101t54.225 Invoke 1 Finish RetrieveVclIntegrityContent on VclIntegrityIntegrity.VclIntegrity [1t2.168.0.18084] - Serial0.001, Server000.021 [ERROR] Vmomi.Fault.DatabaseError Database temporarily unavailable or has network problems. Which solution will resolve this problem?

- A. Modify the user account permissions on the VMware Update Manager server to include Logon as a service.
- B. Modify the ODBC connection used by VMware Update Manager to use SQL authentication.
- C. Remove and re-register the VMware Update Manager plug-in.
- D. Change the VMware Update Manager Service to log on to the remote database as a Windows account with administrator privileges.

Correct Answer: D

QUESTION 5

You are asked to upgrade the version of the Cisco Nexus 1000V software on the vBlock System 320. Which component are you upgrading on the hypervisor?

- A. Service Console
- B. Virtual Supervisor Module (VSM)
- C. Virtual Ethernet Module (VEM)
- D. Virtual Network Interface Card (vNIC)

Correct Answer: C
