QUESTION 1

What are two requirements when customizing a Linux virtual machine that has been deployed from a template? (Choose two.)

- A. VMware Tools must be installed.
- B. The IP address must be assigned.
- C. Perl must be installed.
- D. Python must be installed.

Correct Answer: AC

QUESTION 2

What must you do to enable CLI access to the ESXi host through the DCUI?

- A. Change the VLAN ID.
- B. Disable the firewall ports.
- C. Configure the management network.
- D. Configure the troubleshooting options.

Correct Answer: D

QUESTION 3

A customer requests that you join the management virtual machines to their domain, and modify the required services and databases to use a provided service account. After performing the requested actions, the VMware Update Manager plug-in will not enable and returns the following error: There was an error connecting to VMware vCenter Update Manager server name8084. Database temporarily unavailable or has network problems. The vpxclient.log contains the error shown below: Loaded plugin from C:\Program Files (x86)\VMware\Infrastructure\Virtual Infrastructure Client\Plugins\Update Manager 4.0\vimIntegrityClient.dll Extension.Key - com.vmware.vcIntegrity [Update MSoapTran] 2013-0715 101t54.225 Invoke 1 Finish RetrieveVcIntegrityContent on VcIntegrityIntegrity.VcIntegrity [1t2.168.0.18084] - Serial0.001, Server000.021 [ERROR] Vmomi.Fault.DatabaseError Database temporarily unavailable or has network problems. Which solution will resolve this problem?

- A. Modify the user account permissions on the VMware Update Manager server to include Logon as a service.
- B. Modify the ODBC connection used by VMware Update Manager to use SQL authentication.
- C. Remove and re-register the VMware Update Manager plug-in.
- D. Change the VMware Update Manager Service to log on to the remote database as a Windows account with administrator privileges.

Correct Answer: D

QUESTION 4

You enabled access to the ESXi shell. Administrators now complain that they cannot log in to the ESXi shell although you are still logged on.

What would cause this problem?

- A. The other administrators do not have proper permissions.
- B. The number of connectons exceed the limit.
- C. The ESXi shell tmeout setng was increased from the default setng of 0.
- D. There is an invalid IP setng on the host.

Correct Answer: C

QUESTION 5

A virtual machine appears as orphaned in the virtual infrastructure client but is online and functioning normally over the network.

Which procedure would be used to recover the VM with no down tme?

- A. Delete the virtual machine from the disk, connect directly to a host with the vSphere client, and import the VMX file into the inventory.
- B. Use the vSphere client to connect to the host that the virtual machine is registered to and vMoton the virtual machine to another host.
- C. vMoton the orphaned virtual machine to another host that can access the data store where the virtual machine\\'s fles are located.
- D. Delete and re-create a new virtual machine with the same name, guest OS, and IP address.

Correct Answer: C
