QUESTION 1

Which of the following is a format for storing both public and private keys using a symmetric password-based key to "unlock" the data whenever the key needs to be used or accessed?

- A. PKCS #12
- B. PKCS #10
- C. PKCS #7
- D. PKCS #2

Correct Answer: A

QUESTION 2

Which of the following are characteristics of next-generation firewalls and the Cisco Firepower Management Center (FMC) in relation to incident management? (Select all that apply.)

- A. They provide a list of separate things, such as hosts, applications, email addresses, and services, that are authorized to be installed or active on a system in accordance with a predetermined baseline.
- B. These platforms support an incident lifecycle, allowing you to change an incident's status as you progress through your response to an attack.
- C. You can create your own event classifications and then apply them in a way that best describes the vulnerabilities on your network.
- D. You cannot create your own event classifications and then apply them in a way that best describes the vulnerabilities on your network.

Correct Answer: BC

QUESTION 3

Which of the following is true about Diffie-Hellman?

- A. Diffie-Hellman is a key agreement protocol that enables two users or devices to authenticate each other's preshared keys without actually sending the keys over the unsecured medium.
- B. Diffie-Hellman is an encapsulation protocol that enables two users or devices to send data to each other.
- C. Diffie-Hellman is a part of the RSA encryption suite.
- D. Diffie-Hellman has three phases, and the second and third are used to encrypt data.

Correct Answer: A

QUESTION 4

Which net command option is used to mount a file share?

- A. net use
- B. net mount
- C. net start
- D. net account

Correct Answer: A

QUESTION 5

What is a practical usage of the diamond model?

- A. to separate events from larger activities
- B. to provide knowledge of the adversary
- C. analytical pivoting
- D. to stop CnC domains

Correct Answer: C
