QUESTION 1

Which three statements are characteristics of DHCP Spoofing? (Choose three.)

- A. Arp Poisoning
- B. Modify Traffic in transit
- C. Used to perform man-in-the-middle attack
- D. Physically modify the network gateway
- E. Protect the identity of the attacker by masking the DHCP address
- F. Can access most network devices

Correct Answer: ABC

DHCP spoofing occurs when an attacker attempts to respond to DHCP requests and trying to list themselves (spoofs) as the default gateway or DNS server, hence, initiating a man in the middle attack. With that, it is possible that they can intercept traffic from users before forwarding to the real gateway or perform DoS by flooding the real DHCP server with request to choke ip address resources. <https://learningnetwork.cisco.com/thread/67229>
