QUESTION 1

Which volume layout is most resilient to disk failure?

- A. mirror
- B. layered
- C. stripe
- D. concatenated

Correct Answer: B

QUESTION 2

What are the key components of a group policy in Symantec Mail Security 8300?

- A. a list of sender groups, sender authentication profiles, and scan settings for an organization
- B. disposition configuration, user email addresses, and quarantine settings
- C. an LDAP source and a local domain
- D. conditions, a set of actions, and groups to whom the policy applies

Correct Answer: D

QUESTION 3

What is an advantage of the Veritas Storage Foundation 6.0 for UNIX checkpoint visibility feature?

- A. ensures checkpoint is automatically deleted under certain conditions
- B. eliminates the need for manually mounting storage checkpoints
- C. specifies verbose mode, which displays extensive statistical information
- D. automatically creates new checkpoints as changes are made to the file system

Correct Answer: B

QUESTION 4

Which set of configuration choices will best help reduce the volume of messages that need to be processed by the filtering engine?

- A. enabling SMTP traffic shaping, rejecting Zombie connections in Sender Groups, configuring invalid recipient configuration

- B. deleting all spam messages, deleting all virus attachments, configuring sender authentication
- C. enabling LDAP authentication, quarantining all spam and suspected spam, and increasing concurrent MTA connections
- D. controlling maximum attachment sizes, setting a lower recursion limit for ZIP files, enabling bad message handling

Correct Answer: A

QUESTION 5

A disk has been initialized for use in Veritas Volume Manager (VxVM).

Which command is used to create a disk group named datadg on a device shown as device_tag and using a disk media name of datadg01?

- A. vxdg setup datadg datadg01=device_tag
- B. vxdg define datadg device_tag=datadg01
- C. vxdg init datadg device_tag=datadg01
- D. vxdg init datadg datadg01=device_tag

Correct Answer: D
