QUESTION 1

Which configuration has the lowest percentage of active nodes?

A. active-passive (2 nodes)

B. active-active (2 nodes)

C. 7+1 (8 nodes with one spare)

D. 6+2 (8 nodes with two spares)

Correct Answer: A

QUESTION 2

What is a consideration for properly clustering NFS under Veritas Cluster Server (VCS) control?

A. The NFS daemon must be started by VCS.

B. The logical IP addresses must remain with only one system.

C. The major device numbers need to be identical across all clustered nodes.

D. The NFS daemon may need to be restarted occasionally.

Correct Answer: C

QUESTION 3

Which two pieces of information about database agents should the administrator be aware of when placing a database under Veritas Cluster Server (VCS) control? (Select two.)

A. They are included in the VRTSdbed package for all installation options.

B. They are automatically installed if the administrator selects "recommended" or "all package" sets.

C. They must be installed on all the failover target systems, regardless of whether they will run the database.

D. Agent-specific type files are automatically added to the VCS configuration after the administrator installs agents manually.

E. They can be installed manually from the software distribution using operating system utilities.

Correct Answer: BE

QUESTION 4

Why should Network Monitor be configured to filter out low-threat traffic?

A. Because the product is unable to filter out high-threat traffic

B. To ensure that CPU cycles are spent processing high-threat traffic

C. Because no other traffic will be monitored until this is accomplished

D. To verify that the filtering process is actually working

Correct Answer: B

QUESTION 5

How is the incident count for a new system managed in order to avoid overwhelming the incident response team?

A. Match count thresholds are set.

B. More than one policy is enabled.

C. Many incident responders are allowed access to the system.

D. Incidents are auto-filtered to hide false positives.

Correct Answer: A
