QUESTION 1

A two-system cluster has three failover service groups as shown in the exhibit. The RedSG and WhiteSG service groups are online on node1; the BlueSG service group is online on node2. All resources are enabled and critical. Which action does VCS take when a resource in the WhiteSG service group faults?

- A. The WhiteSG service group enters a faulted state, and the RedSG service group remains online.
- B. The WhiteSG service group enters a faulted state on node1, and the BlueSG service group is taken offline.
- C. The WhiteSG service group enters a faulted state on node1 and fails over to node2.
- D. The WhiteSG service group enters a faulted state on node1, and the RedSG service group is taken offline.

Correct Answer: D

QUESTION 2

What is the first step you should take to upgrade the operating system on a VCS node?

- A. Start the upgrade process
- B. Freeze the service groups
- C. Migrate online service groups
- D. Shut down VCS on all nodes

Correct Answer: C

QUESTION 3

What are default behaviors of VCS service groups? (Choose three.)

- A. Migrate service groups from a system on intentional system shutdown
- B. Start the service groups in alphabetical order
- C. Autodisable the service groups on cluster startup
- D. Autodisable the service groups on a system when HAD fails
- E. Start the service groups in the order of the attribute SystemList

Correct Answer: ACD

QUESTION 4

The hastatus command shows the systems are in STALE_ADMIN_WAIT. What causes this?

- A. The configuration was not closed before restarting HAD.
- B. There is a syntax error in the main.cf configuration file.
- C. There is a main.stale file in the configuration directory.
- D. The main.cf is different on the systems in the cluster.

Correct Answer: B

QUESTION 5

If the hostname is changed in the sysname file, which three additional files must be modified? (Select three.)

- A. llthosts
- B. gabtab
- C. llttab
- D. main.cf
- E. types.cf

Correct Answer: ACD
