### QUESTION 1

An organization is installing a Symantec NetBackup 7.5 master server and the license key is unavailable during the installation process. What will be the result of the installation?

- A. All features will be enabled for a 30-day evaluation period.
- B. Only core functionality will be enabled.
- C. Installation of the master server will fail.
- D. Symantec NetBackup services will fail to start on the master server until a license key is installed.

Correct Answer: C

---

### QUESTION 2

An organization protects Windows clients with archive bit selected. The organization runs full backups weekly on Friday. Daily incrementals run nightly for the rest of the week. An administrator had to perform a full catalog recovery on Wednesday. How should the administrator proceed?

- A. expire the older catalog backup images
- B. modify the schedules to run backups immediately
- C. perform an immediate catalog backup
- D. perform a manual full backup for the clients

Correct Answer: D

---

### QUESTION 3

A media server has four configured LTO5 drives. Two are configured to one HBA and two are configured to the other. A Symantec NetBackup administrator needs to add redundancy and reconfigure the tape drives so that each HBA sees all four LTO5 drives. After the zoning and OS configuration has been completed, the administrator wants to add and test one of the new paths to a drive to ensure the environment runs correctly. How should the administrator add an additional path to one of the existing drives?

- A. rerun the Device Configuration Wizard for all devices
- B. use the Add Path dialog box to an existing drive
- C. use the Add Drive dialog and add the path as a new drive
- D. use the Add Path Device Configuration Wizard

Correct Answer: B

---

#### QUESTION 4

Which command is used to check a system's suitability for running Symantec NetBackup server software before performing an installation on a Windows system?

- A. NBValidate
- B. LiveUpdate
- C. VxValidate
- D. nbsu

Correct Answer: C

---

#### QUESTION 5

A backup on tape is due to expire in one week. The administrator needs to keep the image available for restore indefinitely. Which two methods can be used to accomplish this goal? (Select two.)

- A. use the bpexpire command to change the expiration date of the image
- B. use the bpretlevel command to customize the retention level
- C. use the bpimmedia command to freeze the tape
- D. use the bpduplicate command to create a copy with an infinite retention
- E. use the vmchange command to change the expiration date of the tape

Correct Answer: AD
