- A. Global Filter
- B. Span Package
- C. PC Transplant Editor
- D. A2i Builder

Correct Answer: B

QUESTION 4

When manually creating an entry within the Software Catalog, the administrator needs the Managed Delivery policy to

verify that prerequisite software is installed before deploying a new application. What should the administrator use to execute a prerequisite check?

- A. Detection Rule
- B. Applicability Rule
- C. Basic Inventory
- D. Software Filter

Correct Answer: B

QUESTION 5

A school with a limited budget either receives computers as donations or buys them in small quantities. As a result, the school has several varieties of computers and associated hardware. Each quarter, all student computers must be reset to a fresh state to prepare for the next group of students. When the computers are reset, the OS is manually installed, all of the drivers for each unique system are installed, and each application is installed one at a time by CD. The process is cost effective, but highly prone to error and often results in several days of clean-up by the teachers. Which two benefits would the school realize by using Deployment Solution? (Select two.)

- A. It can automate the application installations through use of the Software Portal.
- B. It can install the operating systems automatically using a Scripted OS Installation.
- C. It can manage the drivers for each system through use of Prepare the Image tasks.
- D. It can install the operating system automatically through use of PC Transplant.
- E. It can automate the application installations through use of Restore Software tasks.
- F. It can automate driver installation through use of Deploy Anywhere.

Correct Answer: BF
