QUESTION 1

Which steps will produce the data required to create an application-specific matching rule?

- A. Use class criteria track to enable tracking on a specific class and then use class criteria recent to see a list of recent values for the class
- B. Use class criteria attributes to see attributes for a specific class and then use class criteria recent to see a list of recent values for the class
- C. Use class criteria trade to enable tracking on a specific class and to see a list of recent values for the class
- D. Use class criteria attributes to see attributes for a specific class and then use class criteria track to track the recent values for the class

Correct Answer: D

QUESTION 2

What statement accurately describes an ignore policy?

- A. With an ignore policy, traffic is ignored but still counted as part of the link traffic under management
- B. It causes PacketShaper to treat specified flows as pass-through traffic
- C. With an ignore policy, the CU must be used to review RTM
- D. It traverses the traffic tree looking for a matching traffic class

Correct Answer: A

QUESTION 3

Refer to the exhibit.

The Global Intelligence Network Of WebPulse service classifies .1 website as "Entertainment; Mumor/tokes." The current configuration of PacketShaper has traffic discovery enabled within the Inbound/HTTP class and has the class tree shown as in the exhibit with WebPulse enabled.

What two (2) classes will the traffic flow into when the client makes a request to the website in question?

(Select two)

- A. Inbound/Local host
- B. inbound/Entertainment
- C. Inbound/HTTP/Default
- D. Inbound/HTTP/Entertainment
- E. Inbound/Humor_jotes

Correct Answer: AD

QUESTION 4

Which scenario would the "burstable al priority" attribute be used in?

- A. To enable a traffic class to access unused bandwidth at Priority 3 or above
- B. When a limit is specified that is less than the policy's guaranteed rate
- C. When a limit is specified that is greater than the policy's guaranteed rate
- D. To enable a traffic class to access unused bandwidth at a specified priority level

Correct Answer: B

QUESTION 5

A network administrator is interested in protecting VoIP traffic on the network.

How can the administrator best accomplish this while maintaining visibility into overall VoIP bandwidth utilization?

- A. An administrator is unable to monitor and protect All VoIP traffic at once using a PacketShaper
- B. Create a class based on the IP addresses of the IP phones so that all traffic between them can be measured and controlled
- C. Use PacketShaper's Flow Detail Record (FDR) feature to have the PacketShaper export VoIP flow data to ReportCenter
- D. Create a folder with a guaranteed minimum sue partition and move all of the VoIP related classes into the folder

Correct Answer: B
