QUESTION 1

A divisional executive requests a report of all incidents generated by a particular region, summarized by department. What must be populated to generate this report?

- A. remediation attributes
- B. sender correlations
- C. status groups
- D. custom attributes

Correct Answer: C

QUESTION 2

A company needs to secure the content of all Mergers and Acquisitions Agreements. However, the standard text included in all company literature needs to be excluded.

How should the company ensure that this standard text is excluded from detection?

- A. create a whitelisted.txt file after creating the Vector Machine Learning (VML) profile
- B. create a whitelisted.txt file before creating the Exact Data Matching (EDM) profile
- C. create a whitelisted.txt file after creating the Indexed Document Matching (IDM) profile
- D. create a whitelisted.txt file before creating the Indexed Document Matching (IDM) profile

Correct Answer: D

QUESTION 3

As the storage administrator for a large multifaceted environment, you are faced with the challenge to support the growth of the environment's capacity and to manage the budget for that growth. The company's management requires you to limit the growth of expenses, even at the cost of using slower storage configurations. On the other hand, the application administrators demand maximum performance. How can you resolve this conflict?

- A. You can use DST to accelerate access to specific volumes.
- B. You must manually assign files to specific volumes at run time.
- C. You can use DST to retrieve inactive data from volume snapshots.
- D. You can use DST to distribute files to appropriately-configured storage within the storage allocated to a DST file system.

Correct Answer: D

**QUESTION 4**

An administrator is attempting to add a new detection server to the Enforce UI. However, the administrator only has the ability to add Network Monitor and Endpoint servers. The option to add a Discover server is missing. What does the administrator need to do to add an additional server type?

- A. log in as Sys Admin/Server Administrator role
- B. update the software license file
- C. restart the Vontu Monitor service
- D. restart Vontu Monitor Controller service

Correct Answer: B

QUESTION 5

You have the hot-relocation feature enabled on your Storage Foundation Server. However, you are getting a disk failure error and you want to resolve the problem by using the vxrelod daemon. Identify the correct sequence of steps that you will perform to resolve this problem?

1.
Inform the administrator regarding the failed disk by electronic mail.
2.
Initiate the appropriate recovery procedures.
3.
Detect the failure by vxrelod daemon to the failed disk.
4.
Determine if any subdisks can be relocated.

- A. 2,4,1,3
- B. 2,1,3,4
- C. 4,1,2,3
- D. 4,3,1,2

Correct Answer: A
