QUESTION 4

A vSphere cluster has the following vSphere Distributed Resource Scheduler (DRS) group configuration:

*

 Virtual machine (VM) group named DB

*

 Host groups named PROD11 and PROD55

The administrator wants to force the VMs in the DB group to run on the hosts in the PROD11 group. However, if all the hosts in PROD55.

Which VM/Host rule must the administrator create to ensure that these requirements are met?

A.

A preferential rule between the DB group and PROD11 group

B.

A preferential rule between the DB group and the PROD55 group

C.

A preferential rule between the DB group and the PROD55 group

D.

A required rule between the DB group and the PROD11 group

Correct Answer: A

Explanation: Option A is correct because it allows the administrator to create a preferential rule between the DB group and PROD11 group, which will force the VMs in the DB group to run on the hosts in the PROD11 group if possible, but will allow them to run on the hosts in PROD55 group if necessary. Option B is incorrect because it will create a preferential rule between the DB group and PROD55 group, which will force the VMs in the DB group to run on the
hosts in PROD55 group if possible, which is not what the administrator wants. Option C is incorrect because it is the same as option B. Option D is incorrect because it will create a required rule between the DB group and PROD11 group, which will force the VMs in the DB group to run only on the hosts in PROD11 group and not allow them to run on the hosts in PROD55 group if needed.
