QUESTION 3

A vRealize Automation user provisions virtual machines (VMs) but complains that the machine prefix for his VMs does not match that of his business group. The vRealize Automation administrator confirms that the blueprint component has the machine prefix set to "Use Group Default."

Which step should be the administrator take to fix the issue with the incorrect machine prefix?

- A. Assign a new machine prefix to the reservation.
- B. Select the required machine prefix in the business group settings.
- C. Select the required machine prefix in the fabric group.
- D. Assign a new machine prefix to the vSphere endpoint.

Correct Answer: B

QUESTION 4

Which two steps must an administrator take to create an approval policy through two levels of management when expanding the resources of a virtual machine beyond a specific footprint? (Choose two.)

- A. Attach the approval policy to the specific day 2 actions: increase RAM, add CPUs and add Disk storage.
- B. Create a two layer approval policy.
- C. Configure the approval policy to re-provision the virtual machine based on a larger blueprint if approval is granted at all levels.
- D. Attach a multiple layer approval policy to the service to which the blueprint is attached.
- E. Set up a conditional approval policy.

Correct Answer: CE

QUESTION 5

A vRealize Automation administrator wants to be able to reconfigure the CPU resources of a managed virtual machine that is deployed by a user in a business group. The administrator is not a member of this business group.

What is the minimum role required for the administrator to be able to reconfigure the virtual machine without changing its ownership or business group?

- A. Manager role
- B. Support role
- C. Shared access role
- D. User role

Correct Answer: A
