QUESTION 1

An administrator configures cloud accounts for vSphere, Amazon Web Services and Google Cloud Platform. Each public cloud account has a single region configured, with a single cloud zone associated with each. Company policy states that all development workloads should be deployed to the public cloud. The administrator wants to ensure that when creating blueprints for this project an appropriate constraint tag is specified to meet the placement policy and that App-Dev users are allowed to select whether to deploy the machine to production or development. The tagging strategy states that development environments should be tagged with "dev" and production environments should be tagged "prod".

Which two actions should the administrator take to ensure the objective is met? (Choose two.)

- A. Add a capability tag to each public cloud zone, using env:prod as the key/value pair.
- B. Add a capability tag to each vSphere cloud zone, using env:prod as the key/value pair.
- C. Add a capability tag to each public cloud zone, using env:dev as the key/value pair.
- D. Add a capability tag to each vSphere cloud zone, using env:dev as the key/value pair.
- E. Add a capability tag to each cloud account, using env:prod as the key/value pair.

Correct Answer: BC

QUESTION 2

Which option should an administrator configure to implement storage profiles in blueprints?

- A. Cloud zones
- B. Projects
- C. Tags D. Flavor mappings

Correct Answer: C

QUESTION 3

An administrator is setting up a storage profile for one of the public cloud accounts.

Which cloud account allows the configuration of device type "EBS" and volume type "General Purpose SSD"?

- A. VMware Cloud on AWS
- B. Google Cloud Platform
- C. Amazon Web Services

D. Microsoft Azure

Correct Answer: C
