### QUESTION 1

An IT Director wants to integrate existing Amazon Web Services CloudFormation templates into a new vRealize Automation deployment.

How can the administrator achieve this? (Choose the best answer.)

- A. Deploy a Cloud Proxy into the appropriate region of the pre-configured Amazon Web Services cloud account.
- B. Add content sources in Service Broker from the pre-configured Amazon Web Services cloud account.
- C. Create and configure a custom integration into Cloud Assembly.
- D. Leverage Action Based Extensibility (ABX) to extend functionality, programmatically.

Correct Answer: B

---

### QUESTION 2

An administrator is tasked with using an existing set of cloud templates and images that are available online through the Marketplace tab in vRealize Automation.

Which integration does the administrator have to configure first to enable this functionality? (Choose the best answer.)

- A. vRealize Orchestrator
- B. Ansible
- C. My VMware
- D. GitLab

Correct Answer: C

---

### QUESTION 3

Which command should an administrator run to manage certificates on a vRealize Automation appliance? (Choose the best answer.)

- A. `/data/vco/usr/lib/vco/app-server/bin/generate_ssl_certificate.sh`
- B. `kubectl certificate`
- C. `/opt/scripts/renew_k8s_certificates.sh`
- D. `vracli certificate`

Correct Answer: B

---

#### QUESTION 4

An administrator needs to create a custom form for a cloud template that has just been created. One of the form input fields needs to be a drop-down that is populated through an external source.

Which vRealize Automation service must the administrator use to complete this task? (Choose the best answer.)

- A. Service Broker
- B. Orchestrator
- C. Cloud Assembly
- D. Code Stream

Correct Answer: A

---

#### QUESTION 5

An administrator configures cloud accounts for vSphere, Amazon Web Services and Google Cloud Platform. Each public cloud account has a single region configured, with a single cloud zone associated with each. Company policy states that all development workloads should be deployed to the public cloud and all production workloads should be deployed to vSphere. The administrator wants to ensure that when creating cloud templates for this project an appropriate constraint tag is specified to meet the placement policy and that App-Dev users are allowed to select whether to deploy the machine to production or development. The tagging strategy states that development environments should be tagged with “dev” and production environments should be tagged “prod”.

Which two actions should the administrator take to ensure the objective is met? (Choose two.)

- A. Add a capability tag to each cloud account, using env:prod as the key/value pair.
- B. Add a capability tag to each public cloud zone, using env:dev as the key/value pair.
- C. Add a capability tag to each vSphere cloud zone, using env:dev as the key/value pair.
- D. Add a capability tag to each vSphere cloud zone, using env:prod as the key/value pair.
- E. Add a capability tag to each public cloud zone, using env:prod as the key/value pair.

Correct Answer: BD
