QUESTION 1

An administrator has been tasked by their organization with determining the type of Horizon deployment to use.

These requirements have been provided to the administrator:

Implement quickly the deployment of Windows and Linux desktops.

Provide hybrid cloud support.

Provide centralized brokering.

Ensure the environment is secure from end-to-end.

Which deployment solution meets the requirements?

- A. vSphere Desktop Edition
- B. Workspace ONE Unified Endpoint Management
- C. Horizon On-Premises
- D. Horizon Cloud on Azure

Correct Answer: C

The best choice given these options is to setup a CPA on-prem so you have highly available instance. You could also deploy VMware Horizon on Azure which is different than a VMware Horizon Cloud instance. Guest support for Horizon

Cloud:

<https://kb.vmware.com/s/article/78170> You would also be able to deploy Horizon in the Azure cloud in a IaaS model and achieve this goal.

QUESTION 2

An end-user complains that their logon time has increased dramatically. An Administrator opens the VMware Logon folder to troubleshoot the issue, but it does not contain log files for the reported session. What could be the cause of this issue?

- A. The Timing Profile is disabled on the Connection server.
- B. The Horizon Event Database is not configured.
- C. The VMware Horizon Logon Monitor service is not started.
- D. The Windows Event Viewer is disabled.

Correct Answer: C

<https://kb.vmware.com/s/article/77099> When the Horizon Agent is installed, the VMware Logon Monitor service defaults

to manual. You must change the startup type to automatic. The user logon segments are not sent to the Horizon Events log but if the timing profiler on the connection servers is enabled, you will see the segments in the Helpdesk Tool.

QUESTION 3

An administrator is leveraging PCoIP protocol in their Horizon environment and wants to distribute clients to end users that have the smallest footprint possible with no local operating system. Which client type satisfies these requirements?

- A. Teradici based zero clients
- B. Windows embedded thin client
- C. MacOS Client
- D. Android based thin client

Correct Answer: A

QUESTION 4

An administrator recently deployed a Horizon pod with external access using Unified Access Gateway (UAG). While trying to launch VDI from an External network, VDI launched with a black screen and then disconnects. The administrator has validated the port requirement and all other required ports are open. Users are able to connect internally using the connection server URL. While reviewing the UAG logs, the administrator found that the Blast connection is hitting the Connection Server instead of VDI IP.

What should the administrator do to resolve the issue?

- A. Disable the Tunnel and Gateways in Connection Server.
- B. Enable Tunnel in UAG.
- C. Update the Blast External URL in UAG with port number.
- D. Upload the Blast Proxy Certificate in Horizon Edge Settings.

Correct Answer: A

getting a black screen then your getting all the way to the connection server and there is an issue on the connection server not the UAG.

QUESTION 5

A Horizon administrator wants to implement Dynamic Environment Manager so that application configuration data is injected when the application is started. Which option would provide this feature?

- A. DirectFlex

B. Application Migration

C. Group Policies

D. Triggered Tasks

Correct Answer: A

<https://docs.vmware.com/en/VMware-Dynamic-Environment-Manager/9.8/com.vmware.user.environment.manager-adminguide/GUID-1912F58E-716A-474D-B09B-26DD1C509679.html>
