QUESTION 1

An administrator is troubleshooting a virtual machine performance issue using vRealize Operations. Which two badges would help to identify possible resource contention concerns? (Choose two.)

- A. Health > Workload
- B. Health > Faults
- C. Risk > Time Remaining
- D. Risk > Stress

Correct Answer: AD

QUESTION 2

An administrator suspects that the MTU value for a vSphere Standard Switch is misconfigured. Which two commands can determine the value? (Choose two.)

- A. esxcfg-vswitch -l
- B. esxcli network vswitch standard list
- C. esxcfg-vss -l
- D. esxcli network standard vswitch list

Correct Answer: AB

QUESTION 3

Which two conditions would prevent an administrator from upgrading an existing vCenter Appliance to vSphere 6.x? (Choose two.)

- A. The appliance has been configured to use an external Single Sign-On server.
- B. The administrator did not export the appliance configuration.
- C. The administrator is using an appliance with an embedded Platform Services Controller.
- D. The ESXi Host that the appliance will run on has not been placed into Maintenance Mode.

Correct Answer: AB

QUESTION 4

An administrator is configuring the clock tolerance for the Single Sign-On token configuration policy and wants to define the time skew tolerance between a client and the domain controller clock. Which time measurement is used for the value?

- A. Milliseconds
- B. Seconds
- C. Minutes
- D. Hours

Correct Answer: A

The time skew tolerance between a client and the domain controller clock is measured in milliseconds.

QUESTION 5

A user notifies an administrator that Content Libraries are not visible. What is a possible solution?

- A. Assign the user the read-only role at the global permission level.
- B. Assign the user the read-only role at the vCenter Server root level.
- C. Assign the user the read-only role at the vCenter Server data center level.
- D. Assign the user the read-only role at the vCenter Server cluster level.

Correct Answer: A

The direct parent for content libraries is the global root. This means that if you set a permission at a vCenter Server level and propagate it to the children objects, the permission applies to data centers, folders, clusters, hosts, virtual machines, and so on, but does not apply to the content libraries that you see and operate with in this vCenter Server instance. To assign a permission on a content library, an Administrator must grant the permission to the user as a global permission. Global permissions support assigning privileges across solutions from a global root object.
