QUESTION 1

Which component automates the consumption of third-party services and provides mapping to virtual machines using a logical policy?

- A. NSX Manager
- B. Cloud Management Platform (CMP)
- C. Service Composer
- D. NSX Data Security

Correct Answer: C

QUESTION 2

A user has configured a specific distributed firewall rule preventing VM-A (172.16.10.11) on the Web-Logical Switch to communicate to VM-B (172.16.20.11), running on the same switch. After the changes, the user is still able to communicate to VM-A from VM-B.

To debug this anomaly, the user will need to obtain logs from which component?

- A. The Distributed Logical Router
- B. The Edge Services Gateway
- C. The appropriate ESXi Hosts(s)
- D. The appropriate NSX Controller(s)

Correct Answer: C

QUESTION 3

The fact that NSX Data Security has visibility into sensitive data provides which two benefits? (Choose two.)

- A. It helps address compliance and risk management requirements.
- B. It acts as a forensic tool to analyze TCP and UDP connections between virtual machines.
- C. It is able to trace packets between a source and destination without requiring access to the guest OS.
- D. It eliminates the typical agent footprint that exists with legacy software agents.

Correct Answer: AB

QUESTION 4

An administrator creates a SpoofGuard policy for specific networks. Which two modes are associated with this type of policy? (Choose two.)

- A. Automatically trust IP assignments on their first use
- B. Manually inspect and approve all IP assignments before use
- C. Manually approve IP assignments listed in the Host file before use
- D. Automatically inspect and trust IP assignments on every use

Correct Answer: AB

QUESTION 5

Which two NSX roles could be used to create security policies? (Choose two.)

- A. Enterprise Administrator
- B. Security Administrator
- C. NSX Administrator
- D. Auditor

Correct Answer: AB
