QUESTION 1

Refer to the exhibit.

```
@Configuration
public class AppConfig {
    @Bean
    public ClientService clientService() {
        return new ClientServiceImpl();
    }
}
```

What is the id/name of the declared bean in this Java configuration class? (Choose the best answer.)

- A. clientServiceImpl (starting with lowercase "c")
- B. clientServiceImpl (starting with uppercase "C")
- C. clientService (starting with lowercase "c")
- D. ClientService (starting with uppercase "C")

Correct Answer: D

QUESTION 2

Which two statements are true regarding bean creation? (Choose two.)

- A. A Spring bean can be explicitly created by annotating methods or fields by @Autowired.
- B. A Spring bean can be implicitly created by annotating the class with @Component and using the component-scanner to scan its package.
- C. A Spring bean can be implicitly created by annotating the class with @Bean and using the component-scanner to scan its package.
- D. A Spring bean can be explicitly created using @Bean annotated methods within a Spring configuration class.
- E. A Spring bean can be explicitly created by annotating the class with @Autowired.

Correct Answer: BE

QUESTION 3

If a class is annotated with @Component, what should be done to have Spring automatically detect the annotated class and load it as a bean? (Choose the best answer.)

- A. Ensure a valid bean name in the @Component annotation is specified.
- B. Ensure a valid @ComponentScan annotation in the Java configuration is specified.
- C. Ensure a valid @Scope for the class is specified.
- D. Ensure a valid @Bean for the class is specified.

Correct Answer: A

QUESTION 4

Which statement describes the @AfterReturning advice type? (Choose the best answer.)

- A. The advice is invoked only if the method returns successfully but not if it throws an exception.
- B. The @AfterReturning advice allows behavior to be added after a method returns even if it throws an exception.
- C. The advice has complete control over the method invocation; it could even prevent the method from being called at all.
- D. Typically used to prevent any exception, thrown by the advised method, from propagating up the call-stack.

Correct Answer: A

QUESTION 5

Which statement defines a pointcut? (Choose the best answer.)

- A. A point in the execution of a program such as a method call or field assignment.
- B. An expression that selects one or more join points.
- C. A module that encapsulated advices.
- D. Code to be executed at each selected join point.

Correct Answer: B
