QUESTION 5

Which two are best practices to implement profiling services in a distributed environment? (Choose two)

A. use of device sensor feature

B. configuration to send syslogs to the appropriate profiler node

C. netflow probes enabled on central nodes

D. node-specific probe configuration

E. global enablement of the profiler service

Correct Answer: BD

https://www.cisco.com/en/US/docs/security/ise/1.0/user_guide/ise10_prof_pol.html#wp134 You can deploy the Cisco ISE profiler service either in a standalone environment (on a single node), or in a distributed environment (on multiple

nodes). Depending on the type of your deployment and the license you have installed, the profiler service of Cisco ISE can run on a single node or on multiple nodes. You need to install either the base license to take advantage of the basic

services or the advanced license to take advantage of all the services of Cisco ISE. The ISE distributed deployment includes support for the following:

he Deployment Nodes page supports the infrastructure for the distributed nodes in the distributed deployment.

node specific configuration of probes--The Probe Config page allows you to configure the probe per node.

lobal Implementation of the profiler Change of Authorization (CoA). onfiguration to allow syslogs to be sent to the appropriate profiler node.
